

device to accord to the foreign purchaser's specifications, not be in conflict with the laws of the foreign country to which the device is being exported, be labeled on the outside of the shipping package that the device is intended for export, and not be sold or offered for sale in domestic commerce).

The only regulation pertaining to exports of unapproved devices for investigational use is at 21 CFR 812.18(b). The provision, which was originally written decades ago, simply stated that, "A person exporting an investigational device subject to this part shall obtain FDA's prior approval as required by section 801(d) of the act." However, since the provision was written, Congress has amended the act twice; under the Drug Export Amendments Act of 1986, section 801(d) of the act was renumbered to become section 801(e) of the act, and the Export Act of 1996 established section 802 of the act as an alternative export mechanism for unapproved devices for investigational use. Consequently, FDA is amending § 812.18(b) to state that, "A person exporting an investigational device subject to this part shall obtain FDA's prior approval as required by section 801(e) of the act or shall comply with the applicable export requirements in section 802 of the act." This amendment reflects the correct paragraph in section 801 of the act that applies to investigational device exports as well as the export mechanisms in section 802 of the act.

Publication of this document constitutes final action on these changes under the Administrative Procedure Act (5 U.S.C. 553(b)(3)(B)). Notice and public procedure are unnecessary because FDA is merely correcting a statutory reference.
