The Office of the Secretary of the Air Force recognizes the many unique and sensitive resources prominent with Alaska. These resources have been effectively identified by the public, special interest organizations, and federal, state, and local officials throughout the study process. The Air Force acknowledges that flying operations over these areas must be strictly managed and accomplished with great sensitivity.

Any questions regarding this matter should be directed to: Mr. Jim Hostman, 611 CES/CEV, 6900 9th Street, Suite 360, Elmendorf Air Force Base, AK 99506-2270, (907) 552-4151.

Draft Integrated Interim Report and Environmental Impact Statement (DEIS) for the Restoration of Assateague Island, as Part of the Ocean City, Maryland, and Vicinity Water Resources Study.

AGENCY: U.S. Army Corps of Engineers, DOD.

ACTION: Notice of availability.

SUMMARY: The Baltimore District Corps of Engineers, Maryland Department of Natural Resources, the National Park Service (Assateague Island National Seashore), Worcester County, and the Town of Ocean City, sponsors of the project, propose the implementation of a short-term plan to restore the sediment-starved barrier island of Assateague. This sediment starvation has been directly caused by the construction of the jetties at the inlet located north of Assateague Island at Ocean City, Maryland. The short-term plan involves placing approximately 1.4 million cubic meters (1.8 million cubic yards) of sand on Assateague Island. The borrow area to be used for the project is Great Gull Bank, an offshore shoal, and possibly a small portion of the ebb shoal at the mouth of the inlet. The area of Assateague Island to be renourished is between 2.5 km (1.6 miles) and 11.3 km (7 miles) south of the inlet. A low berm will be constructed to an elevation of 3.3 m (10.8 feet) NGVD (averaging 0.8 m in height) in the portion of the beach between 2.5 km and 10 km (1.6 miles and 6.2 miles) south of the inlet. The placement will be configured such that the impacts to Piping Plovers, a threatened species, is minimal, and the integrity of the island is restored. A plan for a long-term project is being developed to manage the sand flow in and around the inlet. One of the project's purposes will be to supply to Assateague Island an amount of sand that would naturally be transported, should the jetties and inlet not exist. This plan will be documented in a second report and EIS.
