SUPPLEMENTARY INFORMATION:

Title: Standards of Performance for Phosphate Fertilizer Industry (OMB Control No. 2060-0037; EPA ICR No. 1061.07 expiration date: 6/30/97). This is a request for extension of a currently approved collection.

Abstract: The Administrator has judged that fluoride emissions from the phosphate fertilizer industry cause or contribute to air pollution that may reasonably be anticipated to endanger public health or welfare. Phosphate fertilizer plant and phosphate bearing feed owners/operators of phosphate fertilizer plants must notify EPA of construction, modification, start-ups, shutdowns, malfunctions, and dates and results of the initial performance test. Owners/operators must install, calibrate, and maintain monitoring devices to continuously measure/record pressure drop across scrubbers.

Recordkeeping Shall Consist Of: the occurrence and duration of all startups and malfunctions as described; initial performance tests results; amount of phosphate feed material; equivalent calculated amounts of P₂O₅, and pressure drops across scrubber systems. Startups, shutdowns and malfunctions must be recorded as they occur. Performance test records must contain information necessary to determine conditions of performance test and performance test measurements. Equivalent P₂O₅ stored or amount of feed must be recorded daily. The CMS shall record pressure drop across scrubbers continuously and automatically.

Reporting Shall Include: initial notifications listed; and initial performance test results.

In order to ensure compliance with the standards promulgated to protect public health, adequate reporting and recordkeeping is necessary. In the absence of such information enforcement personnel would be unable to determine whether the standards are being met on a continuous basis, as required by the Clean Air Act.
