

Proposed Collection

The Laboratory of Neurogenetics (LN), Division of Intramural Clinical and Biological Research, NIAAA, intends to conduct the study for 'Transmission and Linkage Analysis of Alcoholism in a Southwestern American Indian Tribe; Collection of EEG Phenotypes Associated with Alcoholism.'

The LN is authorized by Section 452 of Part G of Title IV of the Public Health Service Act (42 U.S.C. 288) as amended by the NIH Revitalization Act of 1993

(Pub. Law 103-43). The information proposed for collection in this study will be used by the NIAAA to determine resting EEG and ERP phenotypes in large American Indian families, correlate this information with psychiatric diagnoses from previous studies, and perform linkage analysis in order to map the genes for these phenotypes which to appear to confer vulnerability to alcoholism in Caucasians. There are obvious great advantages in studying the large

families the NIAAA already contacted, psychiatrically interviewed, and genotyped. The NIAAA hypothesizes that this EEG family study will enable elucidation of the transmission and linkage of alcoholism vulnerability in this tribe. The intent is to identify subgroups of American Indian alcoholics who may be more responsive to particular treatment of prevention strategies.

The annual burden estimates are as follows:

Type and number of respondents	Responses per respondent	Total responses	Hours	Total hours
Clients—400	1	400	2.25	900
Total Number of Respondents		400		
Total Number of Responses		400		
Total Hours		900
