General description of report: This information collection is mandatory (12 U.S.C. 248(a), 461, 603, 615, and 3105(b)(2)) and is given confidential treatment under the Freedom of Information Act (5 U.S.C. 552(b)(4)).

Abstract: This package of reports collects information on: deposits and related items from depository institutions that have transaction accounts or nonpersonal time deposits and that are not fully exempt from reserve requirements ("nonexempt institutions") (FR 2900); Eurocurrency transactions from depository institutions that obtain funds from foreign (non-U.S.) sources or that maintain foreign branches (FR 2950, FR 2951); and selected items on the FR 2900 in advance from samples of nonexempt institutions on a daily basis (FR 2000) and on a weekly basis (FR 2001). The Federal Reserve has raised the deposit cutoff used to determine weekly versus quarterly FR 2900 reporting (the "nonexempt deposit cutoff") above its indexed level of \$59.3 million to \$75.0 million. The higher cutoff will result in a potential shift of almost 1,000 reporters from weekly to quarterly FR 2900 reporting and a significant reduction in annual reporting burden. No revisions to the content of any of the reports have been made. Information provided by these reports is used for administering Regulation D—Reserve Requirements of Depository Institutions; or for constructing, analyzing, and controlling the monetary and reserves aggregates; or both.

Purpose: The Agency for Toxic Substances and Disease Registry (ATSDR) is considering the feasibility of measuring stress related to exposure to hazardous waste sites and releases. The purpose of the expert panel workshop is to provide a forum for ATSDR to solicit individual expert consultation on issues of science and public health practice regarding the best means to assess levels of psychosocial stress in communities affected by hazardous waste sites and releases. The workshop will also provide a forum for scientists, public health officials, and community members to discuss the ethical and social issues associated with measuring stress at hazardous waste sites and the implications for public health policy.

Matters To Be Considered: Expert panel members will be assigned into two work groups: (1) Stress Measurement Panel and (2) Community and Public Health Panel. The two groups will meet concurrently during the workshop. The following tasks will be suggested: (1) examine current research approaches and assessment tools for the measurement of psychosocial stress at hazardous waste sites and identify the most effective methods for assessing psychosocial stress at these sites and (2) discuss the social and ethical issues of measuring stress in communities affected by hazardous waste and the implications for public health policy.
