

water does not necessarily indicate that the drinking water poses a health risk, and that more information about contaminants and potential health effects can be obtained by calling the EPA hotline.

What type of information about the contents of bottled water could be provided that would be analogous to the previously described information required in a CCR? For example, because FDA establishes "allowable levels" and not MCL's for contaminants in bottled water, would providing information describing the term "allowable level" as established in FDA's quality standard regulation for bottled water be analogous to the provision of information about MCL's required in a CCR? Also, by way of an example, for information concerning MCLG's, variances, exemptions that are required in a CCR, are there similar or analogous types of information with respect to bottled water that could be provided to customers?
