Food Safety and Inspection Service
9 CFR Part 318
[Docket No. 96–014DF]
RIN 0583–AC16
Carrageenan, Locust Bean Gum and Xanthan Gum Blend Used as a Binder in Certain Cured Pork Products
AGENCY: Food Safety and Inspection Service, USDA.
ACTION: Direct final rule.
SUMMARY: The Food Safety and Inspection Service (FSIS) is amending the Federal meat inspection regulations to permit the use of a blend of carrageenan, locust bean gum, and xanthan gum as a binder in cured pork products labeled “Ham Water Added” and “Ham and Water Product—X% of Weight is Added Ingredients” in an amount not exceeding 0.5 percent of product formulation, to prevent purging of the brine solution. During manufacturing, these ham products are pumped with a brine solution, the ultimate level of which is controlled by a protein-fat-free (PFF) standard described in 9 CFR 319.104. PFF is the minimum meat protein which is indigenous to the raw, unprocessed pork, expressed as a percent of the nonfat portion of the finished product. These products are normally packaged in clear plastic and enclosed by a vacuum seal. Subsequent to the curing process, the brine purges from the products, settling in the products’ packages, reducing the moisture content of the products and negatively affecting their appearance and quality.
FSIS currently permits the use of carrageenan alone. After reviewing this, FSIS has determined that 9 CFR 318.7(c)(4) should be amended to permit the use of any blend of carrageenan, locust bean gum, and xanthan gum in “Ham Water Added” and “Ham and Water Product—X% of Weight is Added Ingredients” products at a level not to exceed 0.5 percent of the product formulation weight. Such use will reduce the amount of purge from the ham products during storage. This binder is not permitted to be used in combination with any other binder approved for use in cured pork products. This binder shall be designated in the ingredients statement, as provided in 9 CFR 319.104(d).
FSIS expects no adverse public reaction resulting from this change in regulatory language. Therefore, unless the Agency receives adverse comments within the scope of the rulemaking, or notice of intent to submit adverse comments within the scope of the rulemaking are received, the direct final rulemaking notice will be withdrawn and a proposed rulemaking notice will establish a comment period.
Executive Order 12988
This direct final rule has been reviewed under Executive Order 12988, Civil Justice Reform. If this direct final rule is adopted: (1) All state and local laws and regulations that are inconsistent with this rule will be preempted; (2) no retroactive effect will be given to this rule; and (3) administrative proceedings will not be
required before parties may file suit in court challenging this rule.

Executive Order 12866 and Regulatory Flexibility Act

This direct final rule has been determined to be not significant and, therefore, has not been reviewed by OMB.

Effect on Small Entities

The Administrator, FSIS, has made a determination that this direct final rule will not have a significant economic impact on a substantial number of small entities, as defined by the Regulatory Flexibility Act (5 U.S.C. 601). This direct final rule permits the use of an additional binder matrix, a blend of carrageenan, locust bean gum, and xanthan gum, in “Ham Water Added” and “Ham and Water Product—X% of Weight is Added Ingredients.” Manufacturers opting to use the binder blend would incur labeling expenses in revising the ingredients statements of their labels to show the presence of the blend. Decisions by individual manufacturers on whether to use the binder blend in these cured pork products would be based on their conclusions that the benefits outweigh the implementation costs.

PAPERWORK REQUIREMENTS

Manufacturers opting to use a blend of carrageenan, locust bean gum, and xanthan gum as a binder in specific pork products must revise their product labels. Such labeling changes will be generically approved in accordance with 9 CFR 317.5. Any burden associated with labeling changes are approved under OMB number 0583-0092.

BILLING CODE 3410-DM-P

FEDERAL RESERVE SYSTEM

12 CFR Part 204

[Regulation D; Docket No. R-0945]

Reserve Requirements of Depository Institutions

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Final rule.

SUMMARY: The Board is amending Regulation D, Reserve Requirements of Depository Institutions, to decrease the amount of transaction accounts subject to a reserve requirement ratio of three percent, as required by section 19(b)(2)(C) of the Federal Reserve Act, from $49.3 million to $47.8 million of net transaction accounts. This adjustment is known as the low reserve tranche adjustment. The Board is increasing from $4.4 million to $4.7 million the amount of reservable liabilities of each depository institution that is subject to a reserve requirement of zero percent. This action is required by section 19(b)(11)(B) of the Federal Reserve Act, and the adjustment is known as the reservable liabilities exemption adjustment. The Board is also increasing the deposit cutoff levels that are used in conjunction with the reservable liabilities exemption to determine the frequency of deposit reporting from $75.0 million to $78.9 million for nonexempt depository institutions and from $48.2 million to $50.7 million for exempt institutions. (Nonexempt institutions are those with total reservable liabilities exceeding the amount exempted from reserve requirements ($4.7 million) while exempt institutions are those with total reservable liabilities not exceeding the amount exempted from reserve requirements.) Thus, beginning in September 1998, nonexempt institutions with total deposits of $78.9 million or more will be required to report weekly while nonexempt institutions with total deposits less than $78.9 million may report quarterly, in both cases on form FR 2900. Similarly, exempt institutions with total deposits of $50.7 million or more will be required to report quarterly on form FR 2910q while exempt institutions with total deposits less than $50.7 million may report annually on form FR 2910a.

Compliance dates: For depository institutions that report weekly, the low reserve tranche adjustment and the reservable liabilities exemption adjustment will apply to the reserve computation period that begins Tuesday, December 30, 1997, and the corresponding reserve maintenance period that begins Thursday, January 1, 1998. For institutions that report quarterly, the low reserve tranche adjustment and the reservable liabilities exemption adjustment will apply to the reserve computation period that begins Tuesday, December 16, 1997, and the corresponding reserve maintenance period that begins Thursday, January 15, 1998. For all depository institutions, the deposit cutoff levels will be used to screen institutions in the second quarter of 1998 to determine the reporting frequency for the twelve month period that begins in September 1998.
