SUPPLEMENTARY INFORMATION:

I. Abstract

The Advance Monthly Retail Sales Survey (MARTS) provides an early indication of current retail sales activity at the United States level. Policymakers such as the Federal Reserve Board need to have the most timely estimates in order to anticipate economic trends and act accordingly. The Bureau of Economic Analysis (BEA), the Council of Economic Advisors, and other government agencies and businesses use the data to formulate economic policy and make decisions. These estimates have a high BEA priority because of their timeliness. There would be approximately a month delay in the availability of these data if this survey were not conducted. Data are collected monthly from small, medium, and large size businesses, selected using a stratified random sampling procedure. The MARTS sample is reselected periodically, generally at two year intervals. Small and medium-size retailers are requested to participate for those two years, after which they are replaced with new panel members. Smaller firms have less of a chance for selection due to our sampling procedure. Firms canvassed in this survey are not required to maintain additional records and carefully prepared estimates are acceptable if book figures are not available. The change in the response burden is a result of a larger sample size. The sample was increased from 3,363 to 4,100 to improve the quality of the estimates.

II. Method of Collection

We will collect this information by mail, FAX and telephone follow-up.
