The draft guidance is intended to help sponsors of NDA's, ANDA's, and AADA's when conducting BA and BE studies with food for oral immediate release and modified release dosage forms.

The intake of food is known to alter gastrointestinal physiology, generally delaying gastric emptying, stimulating bile flow, altering the pH of gastric environment and the blood flow to the region. These factors can influence the BA (important in new drug and formulation situations) and BE (important in switchability of drug products) when drug products are coadministered with food. Food also may alter luminal metabolism and can
