The deflector will be constructed at Wanapum Dam Spillway 12 for the further development of a device to reduce the level of dissolved gases in the spilled water. A prototype spillway deflector was installed in spillway bay 2 in the spring of 1996. Based on the data collected in 1996, the prototype spillway deflector produced total dissolved gas levels of saturation lower than water passing through spill bays not equipped with the prototype deflector. This second prototype deflector will consist of a triangular concrete section which is located 32 feet below the crest of the spillway. The deflector's horizontal surface will be approximately 12 feet and will run the full width of the spillway slot, approximately 50 feet.
