**SUPPLEMENTARY INFORMATION:**

#### Background

For many years, CVM has approved veterinary prescription antimicrobial products labeled with single fixed dosages for a narrow range of specific diseases and organisms. The very narrow label indications often failed to address the fact that, while some specific bacteria produce repeatable, recognized disease, many organisms are

either opportunistic or are known to produce a variety of clinical manifestations. In addition, with the approval of single fixed dosages, the efficacy of some products could become suboptimal as bacterial susceptibility patterns change with time.

The basic concept of Professional Flexible Labeling (PFL) is to provide prescription veterinary products that carry useful prescribing information for the range of clinical situations included within their approved conditions of use. Implementation of PFL is based on the recognition that, as a function of their medical training, veterinarians possess the knowledge, skills, and abilities to interpret medical diagnostic and prescribing information. Accordingly, they are able to develop these data into appropriate therapeutic regimens. In the course of their professional studies, veterinarians are trained in microbiology, the interpretation of bacterial culture and sensitivity determinative procedures, and pharmacokinetics. This knowledge gives them the ability to determine the appropriateness of a particular drug for use in a specific case.

Under section 502 (f)(1) of the Federal Food, Drug, and Cosmetic Act (the act), a drug is deemed to be misbranded unless its labeling bears adequate directions for use (21 U.S.C. 352(f)(1)). The regulations regarding veterinary drugs at 21 CFR 201.105 exempt a drug from this provision of the act if it is in the possession of a licensed veterinarian for use in the course of professional practice, is dispensed in accordance with section 503(f) of the act (21 U.S.C. 353(f)), and its label bears certain stipulated information. Section 504 of the act (21 U.S.C. 354) stipulates that a veterinary feed directive drug, a drug intended for use in or on animal feed which is limited to use under the supervision of a licensed veterinarian, is exempt from section 502(f) when labeled, distributed, held, and used in accordance with the conditions set forth in section 504.

Drugs labeled in accordance with the PFL concept require the training of licensed veterinarians to help ensure appropriate clinical usage. Such labels would not provide adequate directions for use by the lay person. Therefore, use of PFL on nonprescription or nonveterinary feed directive drugs would cause the drugs to be misbranded under section 502 (f)(1) of the act, PFL-labeled drugs must be classified as prescription animal drugs or veterinary feed directive drugs. Accordingly, the PFL concept discussed in this document may apply to either veterinary
