Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) and the Agency for Toxic Substances and Disease Registry (ATSDR) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call the CDC/ATSDR Reports Clearance Officer on (404) 639–7090.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques for other forms of information technology. Send comments to Wilma Johnson, CDC/ATSDR Reports Clearance Officer, 1600 Clifton Road, MS–D24, Atlanta, GA 30333. Written comments should be received within 60 days of this notice.

Proposed Projects

1. Project Intensive Care Antimicrobial Resistance Epidemiology (ICARE), Phase 3—Reinstatement—The Hospital Infections Program, National Center for Infectious Diseases, Centers for Disease Control and Prevention, is proposing a study to investigate the

relationship between use of antimicrobial agents and the incidence of antimicrobial resistance at 40 U.S. hospitals. The proposed Phase 3 study of Project ICARE will be very similar to Phase 2 ICARE with minor revisions. We hope to enroll 40 hospitals and address many confounding factors of antimicrobial resistance. In addition, these hospitals will serve as a sentinel surveillance system for different antimicrobial resistant pathogens, such as vancomycin resistant staphylococci. About half of the hospitals have participated in Phase 2 of Project

ICARE. Participating hospitals will all be active participants of the CDC's National Nosocomial Infections Surveillance (NNIS) system. Phase 3 of Project ICARE is a refinement of the Phase 2 study and will allow interhospital comparison of data (i.e., sending interim reports back to study hospitals) facilitated by incorporating differences in culturing frequency, case-mix by ICU type and speciality wards (i.e., internal organization), barrier precautions, and prescribing practice policies. Phase 3 will also allow for valid comparison of attempts at

reducing antimicrobial resistance in study hospitals (i.e., publish results of interventions to reduce antimicrobials resistance at study hospitals). Also, key parameters of antimicrobial use could be correlated with antimicrobial resistance levels and tracked through the hospital's quality improvement indicator process, pharmacy and therapeutics committee, or medical staff. Unnecessary use of antimicrobials may be reduced by these efforts if the information can be provided to hospitals. Average cost to respondents is \$17.18.
