§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

98-03-16 The New Piper Aircraft Corporation: Amendment 39-10308; Docket No. 96-CE-53-AD.

Applicability: Model PA–38–112 airplanes (serial numbers 38–80A0166 through 38–82A0122), certificated in any category.

Note 1: The serial numbers listed in the applicability section of this AD do not match the serial numbers in Piper Aircraft Corporation (Piper) Service Bulletin (SB) No. 686, dated May 23, 1980. This AD takes precedence over the applicability section in the Piper SB 686, dated May 23, 1980.

Note 2: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it. Compliance: Required as indicated in the body of this AD, unless already accomplished.

To prevent cracks in the upper rudder hinge bracket, which could result in separation of the rudder from the airplane and loss of control of the airplane, accomplish the following:

(a) Upon the accumulation of 5,000 hours total time-in-service (TIS) or within the next 100 hours TIS after the effective date of this AD, whichever occurs later, remove and replace the upper rudder hinge bracket, part number (P/N) 77610–02 or an FAA-approved equivalent part number, with a new upper rudder hinge bracket, P/N 77610–03.

Thereafter, at intervals not to exceed 5,000 hours TIS, replace the upper rudder hinge bracket, P/N 77610–03, with a new upper rudder hinge bracket, P/N 77610–03 in accordance with the Instructions section of Piper SB No. 686, dated May 23, 1980.

(b) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(c) An alternative method of compliance or adjustment of the initial or repetitive compliance times that provides an equivalent level of safety may be approved by the Manager, Atlanta Aircraft Certification Office. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Atlanta Aircraft Certification Office.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from Atlanta Aircraft Certification Office.

(d) The removal and replacements required by this AD shall be done in accordance with the Instructions section of Piper Aircraft Corporation Service Bulletin No. 686, dated May 23, 1980. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from The New Piper Aircraft Corporation, Attn: Customer Service, 2926 Piper Dr., Vero Beach, Florida 32960. Copies may be inspected at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, N.W., suite 700, Washington, DC.

(e) This amendment (39–10308) becomes effective on March 16, 1998.

Issued in Kansas City, Missouri, on January 29, 1998.

Terry L. Chasteen,
Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Boeing Model 757 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Boeing Model 757 series airplanes, that requires one-time inspections to verify proper installation and to detect chafing and/or damage of certain rerouted wire bundles; to verify if certain protective grommets are installed properly and to detect missing grommets; and various follow-on actions.

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Several commenters support the proposed rule.

Request for Clarification

One commenter suggests that the FAA provide clear and objective criteria in the proposed AD for determining if the wire bundle is too tight or too slack. The commenter states that sufficient clearance is very important when determining the length of a wire bundle. The FAA finds that clarification of this point is necessary. The FAA’s intent was that operators refer to Boeing Standard Wiring Practices Manual 20–10–11 (undated) for these procedures. Therefore, the FAA has revised paragraph (a)(1)(ii) of the final rule to include a reference to this manual as the appropriate source of service information for correction of discrepancies.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of March 18, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, N.W., suite 700, Washington, DC.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Boeing Model 757 series airplanes was published in the Federal Register on April 17, 1997 (62 FR 18726). That action proposed to require one-time inspections to verify proper installation and to detect chafing and/or damage of certain rerouted wire bundles; to verify if certain protective grommets are installed properly and to detect missing grommets; and various follow-on actions.

Several commenters support the proposed rule.

Request for Clarification

One commenter suggests that the FAA provide clear and objective criteria in the proposed AD for determining if the wire bundle is too tight or too slack. The commenter states that sufficient clearance is very important when determining the length of a wire bundle. The FAA finds that clarification of this point is necessary. The FAA’s intent was that operators refer to Boeing Standard Wiring Practices Manual 20–10–11 (undated) for these procedures. Therefore, the FAA has revised paragraph (a)(1)(ii) of the final rule to include a reference to this manual as the appropriate source of service information for correction of discrepancies.
Conclusion

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the change previously described. The FAA has determined that this change will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

There are approximately 62 Boeing Model 757 series airplanes of the affected design in the worldwide fleet. The FAA estimates that 28 aircraft of U.S. registry will be affected by this AD, that it will take approximately 2 work hours per airplane to accomplish the required actions, and that the average labor rate is $60 per work hour. The cost of required parts will be nominal. Based on these figures, the cost impact of the AD on U.S. operators is estimated to be $3,360, or $120 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the required actions of this rule, that all operations are under the criteria of the Regulatory Impact Procedure (44 FR 11034, February 26, 1979); and (3) Regulatory Policies and Procedures (44 FR 20882, April 11, 1979). The Regulatory Impact Procedure provides for an alternative method of compliance which may include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(q), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Docket 96–NM–222–AD.

Applicability: Model 757 series airplanes, on which Boeing Alert Service Bulletin 757–24A0025, dated March 30, 1985, and/or Boeing Service Bulletin 757–24A0025, Revision 1, dated December 17, 1987, has been accomplished; excluding variable numbers NA003, NA004, NA007, NA009, NA010, NA012 through NA016 inclusive, and NA021, certified in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD.

2. Section 39.13 is amended by adding the following new airworthiness directive:

Docket 96–NM–222–AD.

Applicability: Model 757 series airplanes, on which Boeing Service Bulletin 757–2440025, dated May 10, 1985, and/or Boeing Service Bulletin 757–24A0025, Revision 1, dated December 17, 1987, has been accomplished; excluding variable numbers NA003, NA007, NA009, NA010, NA012 through NA016 inclusive, and NA021, certified in any category.

Note 2: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD.

Compliance Required as indicated, unless accomplished previously.

To prevent chafing of wire bundles, which could result in smoke and fire at the E1–1 rack of the electrical equipment bay, accomplish the following:

(a) Within 6 months after the effective date of this AD, accomplish paragraphs (a)(1), (a)(2), and (a)(3) of this AD.

(1) Perform one-time inspection to verify proper installation and to detect chafing and/or damage of the wire bundles, having part numbers P/N W4508, W2608, and W2604. Pay particular attention to the area where the wire bundles are routed through the web supports and the area over the edge of intercostal R–23L.

(i) If the wire bundles are installed properly and no chafing or damage is detected, no further action is required by this paragraph.

(ii) If any chafing or damage is detected, prior to further flight, repair it in accordance with Boeing Standard Wiring Practices Manual 20–10–13 (not dated).

(iii) If any wire bundle is installed improperly, prior to further flight, loosen the wire bundle clamps, adjust the wire bundles to achieve proper clearances, and retighten the wire bundle clamps, in accordance with Boeing Standard Wiring Practices Manual 20–10–11 (not dated).

(2) Perform a one-time inspection to verify if all protective grommets identified in Boeing Alert Service Bulletin 757–24A0025, dated May 10, 1985, are installed properly and to detect missing grommets. If any grommet is improperly installed or missing, prior to further flight, replace the grommet with a new grommet, as applicable, in accordance with the alert service bulletin.

(3) Perform a one-time inspection to determine if a protective grommet is installed on the upper edge of intercostal R–23L at approximately station 450 between the intercostal and wire bundles having P/N’s W2608 and W4508. If no protective grommet is installed, prior to further flight, install one between the wire bundles and intercostal, in accordance with Boeing Production Installation Drawing 288N4329, Revision H, Sheets 1 and 2 (undated).

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Manager, Seattle Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Seattle ACO.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Seattle ACO.

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) Certain actions shall be done in accordance with Boeing Alert Service Bulletin 757–24A0025, dated May 10, 1985, Boeing Production Installation Drawing 288N4329, Revision H, Sheets 1 and 2 (not dated), Boeing Standard Wiring Practices Manual 20–10–11 (not dated), and Boeing Standard Wiring Practices Manual 20–10–13 (not dated). This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(e) This amendment becomes effective on March 18, 1998.

Darrell M. Pederson,
Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.
