

EPA has concluded that the project will not cause any significant adverse environmental impacts.

The remaining issues identified in the comment letters dealing with the effectiveness of the system, use of ANSI/IEEE standards, compliance with the 1983 MOU, impacts to the mahogany trees, environmental justice and the potential for cumulative impacts have been previously addressed in the FEIS and require no further discussion.

### Conclusion

Existing ROTH systems in Virginia and Texas have already demonstrated the ability to reliably detect, track, and aid in the interception of light civil aircraft of the type used by drug traffickers. However, the Virginia and Texas ROTH systems and other surveillance methods provide incomplete coverage of the South American source countries, resulting in gaps that are exploited by drug traffickers. Early detection and tracking provided by the Puerto Rico ROTH will improve reaction time of counter-narcotic forces, increasing their efficiency and effectiveness.

Although the no action alternative would result in no environmental impacts, the minimal impacts associated with construction at the selected locations, as well as the benefits which will result from the ROTH, make the selected alternative the environmentally preferred alternative.
