### Habitat Conservation Plan Assurances ("No Surprises") Rule

**AGENCY:** Fish and Wildlife Service, Interior; National Marine Fisheries Service, NOAA, Commerce.

**ACTION:** Final rule.

**DATES:** This rule is effective March 25, 1998.

**SUMMARY:** This final rule codifies the Habitat Conservation Plan assurances provided through section 10(a)(1)(B) permits issued under the Endangered Species Act (ESA) of 1973, as amended. Such assurances were first provided through the "No Surprises" policy issued in 1994 by the Fish and Wildlife Service (FWS) and the National Marine

Fisheries Service (NMFS), (jointly referred to as the "Services,") and included in the joint FWS and NMFS Endangered Species Habitat Conservation Planning Handbook issued on December 2, 1996 (61 FR 63854). The No Surprises policy announced in 1994 provides regulatory assurances to the holder of a Habitat Conservation Plan (HCP) incidental take permit issued under section 10(a) of the ESA that no additional land use restrictions or financial compensation will be required of the permit holder with respect to species covered by the permit, even if unforeseen circumstances arise after the permit is issued indicating that additional mitigation is needed for a given species covered by a permit. The Services issued a proposed rule on May 29, 1997 (62 FR 29091) and the comments received on that proposal have been evaluated and considered in the development of this final rule. This final rule contains revisions to parts 17 (FWS) and 222 (NMFS) of Title 50 of the Code of Federal Regulations necessary to implement the Habitat Conservation Plan assurances.

**ADDRESSES:** To obtain copies of the final rule or for further information, contact Chief, Division of Endangered Species, U.S. Fish and Wildlife Service, Washington, D.C., 20240; or Chief, Endangered Species Division, National Marine Fisheries Service, Office of Protected Resources, 1315 East-West Highway, Silver Spring, MD, 20910. **FOR FURTHER INFORMATION CONTACT:** E. LaVerne Smith, Chief, Division of Endangered Species, U.S. Fish and Wildlife Service, (Telephone 703/358-2171, or Facsimile 703/358-1735), or Nancy Chu, Chief, Endangered Species Division, National Marine Fisheries Service (Telephone (301/713-1401, or 301/713-0376).

**SUPPLEMENTARY INFORMATION:** These final regulations and the background information regarding the final rule apply to both Services. The proposed rule has been revised based on the comments received. The final rule is presented in two parts because the Services have separate regulations for implementing the section 10 permit process. The first part is for the final changes in the FWS's regulations found at 50 CFR 17.22 and 17.32, and the second part is for the final changes in NMFS's regulations found at 50 CFR 222.22.

### Background

Section 9 of the ESA generally prohibits the "take" of species listed under the ESA as endangered. Pursuant to the broad grant of regulatory

authority over threatened species in section 4(d) of the ESA, the Services' regulations generally prohibit take of species listed as threatened. See, e.g., 50 CFR 17.31 and 17.21 (FWS). Section 3(18) of the ESA defines "take" to mean "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." FWS regulations (50 CFR 17.3) define "harm" to include "significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding or sheltering."

Section 10 of the ESA, as originally enacted in 1973, contained provisions allowing the issuance of permits authorizing the taking of listed species under very limited circumstances for non-Federal entities. In the following years, both the Federal government and non-Federal landowners became concerned that these permitting provisions were not sufficiently flexible to address situations in which a property owner's otherwise lawful activities might result in limited incidental take of a listed species, even if the landowner were willing to plan activities carefully to be consistent with the conservation of the species. As a result, Congress included in the ESA Amendments of 1982 provisions under section 10(a) to allow the Services to issue permits authorizing the incidental take of listed species in the course of otherwise lawful activities, provided that those activities were conducted according to an approved conservation plan (habitat conservation plan or HCP) and the issuance of the HCP permit would not jeopardize the continued existence of the species. In doing so, Congress indicated it was acting to "\* \* \* address the concerns of private landowners who are faced with having otherwise lawful actions not requiring Federal permits prevented by section 9 prohibitions against taking \* \* \* " H.R. Rep. No. 835, 97th Cong., 2d Sess. 29 (1982) (hereafter "Conf. Report").

Congress modeled the 1982 section 10 amendments after the conservation plan developed by private landowners and local governments to protect the habitat of two listed butterflies on San Bruno Mountain in San Mateo County, California while allowing development activities to proceed. Congress recognized in enacting the section 10 HCP amendments that:

"\* \* \* significant development projects often take many years to complete and permit applicants may need long-term permits. In this situation, and in order to provide sufficient incentives for the private sector to

participate in the development of such long-term conservation plans, plans which may involve the expenditure of hundreds of thousands if not millions of dollars, adequate assurances must be made to the financial and development communities that a section 10(a) permit can be made available for the life of the project. Thus, the Secretary should have the discretion to issue section 10(a) permits that run for periods significantly longer than are commonly provided [for other types of permits]." (Conf. Report at 31).

Congress also recognized that long-term HCP permits would present unique issues that would have to be addressed if the permits were to function to protect the interests of both the species involved and the non-Federal community. For instance, Congress realized that " \* \* \* circumstances and information may change over time and that the original [habitat conservation] plan might need to be revised. To address this situation, the Committee expects that any plan approved for a long-term permit will contain a procedure by which the parties will deal with unforeseen circumstances." (Conf. Report at 31). Congress also recognized that non-Federal property owners seeking HCP permits would need to have economic and regulatory certainty regarding the overall cost of species mitigation over the life of the permit. As stated in the Conference Report on the 1982 ESA amendments:

"The Committee intends that the Secretary may utilize this provision to approve conservation plans which provide long-term commitments regarding the conservation of listed as well as unlisted species and long-term assurances to the proponent of the conservation plan that the terms of the plan will be adhered to and that further mitigation requirements will only be imposed in accordance with the terms of the plan. In the event that an unlisted species addressed in the approved conservation plan is subsequently listed pursuant to the Act, no further mitigation requirements should be imposed if the conservation plan addressed the conservation of the species and its habitat as if the species were listed pursuant to the Act." (Conf. Report at 30 and 50 FR 39681-39691, Sept. 30, 1985).

Congress thus envisioned and allowed the Federal government to provide regulatory assurances to non-Federal property owners through the section 10 incidental take permit process. Congress recognized that conservation plans could provide early protection for many unlisted species and, ideally, prevent subsequent declines and, in some cases, the need to list covered species.

The Services decided that a clearer policy regarding the assurances provided to landowners entering into an HCP was needed. This need prompted the development of the No Surprises policy, which was based on the 1982

Congressional Report language and a decade of working with private landowners during the development and implementation of HCPs. The Services believed that non-Federal property owners should be provided economic and regulatory certainty regarding the overall cost of species conservation and mitigation, provided that the affected species were adequately covered by a properly functioning HCP, and the permittee was properly implementing the HCP and complying with the terms and conditions of the HCP permit in good faith. A driving concern during the development of the policy was the absence of adequate incentives for non-Federal landowners to factor endangered species conservation into their day-to-day land management activities.

The Services issued the ESA No Surprises policy in August of 1994. This policy was then included in the joint Endangered Species Habitat Conservation Planning Handbook, which was published in draft form for public review and comment on December 21, 1994 (59 FR 65782), and, after consideration of the comments, was issued as final in December 1996 (61 FR 63854). In addition to that opportunity for public comment on the No Surprises policy in general, the application of the policy and its assurances have been and continue to be subject to an opportunity for public comment on each proposed HCP permit under section 10(c) of the ESA on a case-by-case basis. The Services were subsequently sued in *Spirit of the Sage Council v. Babbitt*, No. 1:96CV02503 (SS) (D. D.C.), which challenged the procedures under which the No Surprises policy was adopted and under which subsequent HCP permits were issued. In settling this lawsuit, the Services agreed to submit the No Surprises Policy to further public comment and to consider public comment in deciding whether to adopt the No Surprises policy as a final regulation. The Services agreed to this approach because they recognized the benefits of permanently codifying the No Surprises policy as a rule in 50 CFR, as well as the value of soliciting additional comments on the policy itself.

#### Summary of the Proposed Rule

The proposed rule stated that the Services, when negotiating unforeseen circumstances provisions for HCPs, would not require the commitment of additional land, property interests, or financial compensation beyond the level of mitigation that was otherwise

adequately provided for a species under the terms of a properly functioning conservation plan. Moreover, the Services would not seek any other form of additional mitigation from a permittee except under unforeseen circumstances. However, if additional mitigation measures were subsequently deemed necessary to provide for the conservation of a species that was otherwise adequately covered under the terms of a properly functioning conservation plan, the obligation for such measures would not rest with the permittee.

Under the proposed rule, if unforeseen circumstances warrant additional mitigation from a permittee who is in compliance with the conservation plan's obligations, such mitigation would, to the maximum extent possible, be consistent with the original terms of the conservation plan. Further, any such changes will be limited to modifications within conserved habitat areas, if any, or to the conservation plan's operating conservation program for the affected species. Additional mitigation requirements would not involve the payment of additional compensation or apply to parcels of land or the natural resources available for development under the original terms of the conservation plan without the consent of the permittee.

Criteria were also developed by the Services that must be used for determining whether and when unforeseen circumstances arise.

Under the proposed rule, the Services also would not seek any form of additional mitigation for a species from a permittee where the terms of a properly functioning conservation plan were designed to provide an overall net benefit for that species and contained measurable criteria for the biological success of the conservation plans which have been or are being met. Nothing in the proposed rule would limit or constrain the Services, or any other governmental agency, from taking additional actions at its own expense to protect or conserve a species included in a conservation plan.

The Services also proposed a permit-shield provision in the proposed rule that stated that compliance with the terms of an incidental take permit constitutes compliance with the requirements of sections 9 and 10 of the ESA with respect to the species covered by the permit regardless of changes in circumstances, policy, and regulation, unless a change in statute or court order specifically requires that assurances given in the original permit be modified or withdrawn.

The Services also clarified in the proposed rule that the regulatory and economic assurances provided to HCP permittees are limited to section 10(a)(1)(B) permits. In addition, the assurances are not provided to Federal agencies.

#### Summary of Comments Received

The Services received more than 800 comments on the proposed rule from a large variety of entities, including Federal, State, County, and Tribal agencies, industry, conservation groups, religious groups, coalitions, and private individuals. The Services considered all of the information and recommendations received from all interested parties on the proposed regulation during the public comment period and appreciated the comments received on the proposed rule. In addition to comments that specifically addressed the proposed No Surprises policy in the proposed rule, the Services received numerous additional comments on the HCP process itself, comments which were beyond the narrow scope of this particular rulemaking on the No Surprises policy. The Services will utilize these more generic comments on HCPs, as appropriate, as we continue to improve the implementation of our HCP programs. However, at this time, the Services will only address comments received that are specific to the proposed No Surprises rule.

The Services have made changes in the proposed rule where appropriate. In addition, the Services intend to revise the HCP Handbook, both to reflect the final No Surprises rule and to further enhance the effectiveness of the HCP process in general through expanded use of adaptive management, monitoring provisions, and the establishment of overall biological goals for HCPs.

The following is a summary of the comments on the proposed regulations, and the Services' response.

*Issue 1:* Many commenters believed that to provide regulatory No Surprises assurances, the Secretary was directed to “\* \* \* consider the extent to which the conservation plan is likely to enhance the habitat of the listed species or increase the long-term survivability of the species or its ecosystem \* \* \*” (Conf. Report at 31.) and that the Services have no legislative authority to provide regulatory assurances for HCPs that do not meet this standard.

*Response 1:* A proposed HCP must satisfy the specific issuance criteria enumerated in section 10(a)(2)(B) of the ESA. In deciding whether these criteria have been satisfied and whether the

permit should be issued for a given species, the Services consider, among other things, the extent to which the habitat of the affected species or its long-term survivability may be improved or enhanced. While it may be appropriate to consider an “enhancement factor” for an HCP, it is not a mandatory section 10(a)(2)(B) issuance criterion for all species.

Each HCP is analyzed on a case-by-case basis, using the best scientific information available. Habitat conditions are part of the data the Services evaluate to determine whether a proposed HCP meets the section 10 issuance criteria. The legislative history of the 1982 amendments to section 10 of the ESA indicates that Congress viewed habitat improvement and species conservation as appropriate considerations in determining whether to issue long-term incidental take permits. Certain types of HCPs, such as forest HCPs that include aquatic species, often allow for significant timber harvest and consequent species impacts during the initial years, while it may take decades before the riparian measures under the plan produce stream conditions that provide essential habitat functions for the listed species. The Services agree that, in appropriate situations, the legislative history supports including measures to provide for improved habitat over the life of the plan in section 10 permits. Severely depleted species and species for which the HCP covers all or a significant portion of the range are examples of circumstances in which essential habitat functions must be addressed to ensure that the conservation measures in the HCP provide a high probability that the habitat functions essential to the species' long-term survival will be achieved and maintained during the term of the permit.

*Issue 2:* Many commenters felt that this proposed regulation was driven solely by the needs of private landowners, and is not in the best interests of the species or other public concerns. Many commenters noted that the proposed regulation did not have commensurate certainties for protection of biological resources.

*Response 2:* The section 10(a) HCP provisions of the ESA were designed to help alleviate section 9 “take” liability for species on non-Federal lands. The ESA, as originally enacted, allowed the taking of listed species only under very limited circumstances, and did not, for example, allow the incidental take of listed species in the course of otherwise lawful activities. The 1982 ESA amendments to section 10(a) authorize the Services to issue HCP permits

allowing the incidental take of listed species in the course of otherwise lawful activities, provided the activities are conducted according to an approved habitat conservation plan that minimize and mitigate take and avoids jeopardy to the continued existence of the affected species.

The Services disagree that the No Surprises policy has a narrow focus that excludes the consideration of listed species conservation. To the contrary, a driving concern in the development of the policy was the absence of adequate incentives for non-Federal landowners to factor endangered species conservation into their day-to-day land management activities. The Services knew that much of the habitat of listed species is in non-Federal lands and believed that HCPs should play a major role in protecting this habitat. Yet, while thousands of acres of species habitat were disappearing each year, only a handful of HCPs had been sought and approved since 1982. The No Surprises policy was designed to rechannel this uncontrolled ongoing habitat loss through the regulatory structure of section 10(a)(1)(B) by offering regulatory certainty to non-Federal landowners in exchange for a long-term commitment to species conservation. Given the significant increase in landowner interest in HCPs since the development of the No Surprises policy, the Services believe that the policy has accomplished one of its primary objectives—to act as a catalyst for integrating endangered species conservation into day-to-day management operations on non-Federal lands. The Services also believe that the HCP process, which is a mechanism that reconciles economic development and the conservation of listed species, is good for rare and declining species, and encourages the development of more of these plans. If species are to survive and recover, such plans are necessary because more than half of the species listed have 80 percent of their habitat on non-Federal lands.

*Issue 3:* Many commenters stressed that the proposed regulation would unlawfully allow the Services to avoid their mandatory duties under section 7 of the ESA. They argued that the proposed regulation precludes the Services from meeting the regulatory and statutory requirements under 50 CFR 402.16 and section 7(d) because it makes reinitiation of consultation useless and precludes any meaningful reexamination of mitigation measures if the measures in the HCP are later found to be inadequate to avoid jeopardy as required under section 7(a)(2). If jeopardy did arise, commenters do not

feel that the Services would be able to implement the necessary mitigation to avoid the jeopardy because of lack of funding. Other concerns were also raised by commenters regarding the respective balance of responsibilities among the participants to an HCP containing a No Surprises assurance. Also, some commenters suggested the Services would not be fulfilling their mandatory conservation obligations under section 7(a)(1).

*Response 3:* The Services are committed to meeting their responsibilities under section 7(a)(2) of the ESA. As required by law, the Services conduct a formal intra-Service section 7 consultation regarding the issuance of each permit issued under section 10(a)(1)(B). The purpose of any consultation is to insure that any action authorized, funded, or carried out by the Federal government, including the issuance of an HCP permit, is not likely to jeopardize the continued existence of any listed species or result in the destruction or adverse modification of critical habitat of such species. In addition, the Services encourage all applicants to maximize benefits to species covered by their HCPs because of the Services' responsibilities under 7(a)(1). Moreover, as discussed in Response #1, in appropriate situations, such as when an HCP covers most or the entire range of a species or covers severely depleted species, the Services will seek measures necessary for the long-term survival of the species and its habitat.

The Services do not believe they are disregarding the requirements of section 7(d) in providing assurances to landowners through the section 10 process. During the formal section 7(a)(2) consultation process, and prior to the issuance of a final biological opinion, the Services (like any other Federal action agency) must not make any irreversible or irretrievable commitments of resources (in the case of proposing to issue an HCP permit, the Services cannot authorize incidental take) that would preclude the development of reasonable and prudent alternatives in the event that the action, as proposed, violates section 7(a)(2) of the ESA. In the context of HCP permit procedures, the only manner in which the Services could violate section 7(d) is if they authorized incidental take prior to making a final decision on a permit application, which is never the case.

In addition, the No Surprises assurances do not make reinitiation of consultation useless or preclude any meaningful reexamination of the HCP's operating conservation program. The Services will not require the landowner to provide additional mitigation

measures in the form of additional land, water, or money. However, additional mitigation measures can be provided by another entity. Similarly, the No Surprises rule does not preclude the Services from shifting emphasis within an HCP's operating conservation program from one strategy to another in an effort to enhance an HCP's overall effectiveness, provided that such a shift does not increase the HCP permittee's costs. For example, if an HCP's operating conservation program originally included a mixture of predator depredation control and captive breeding, but subsequent research or information demonstrated that one of these was considerably more effective than the other, the Services would be able to request an adjustment in the proportionate use of these tools, provided that such an adjustment did not increase the overall costs to the HCP permittee.

Moreover, if the Services reinitiate consultation on the permitting action, and if additional measures are needed, the Services will work together with other Federal, State, and local agencies, Tribal governments, conservation groups, and private entities to ensure additional measures are implemented to conserve the species.

Regarding the concerns on the respective balance of responsibilities among the participants to an HCP containing a No Surprises assurance, the Services believe the No Surprises rule places the preponderance of the responsibility for protection beyond the terms of a specific HCP upon the Services. The only impediments to the Services' assumption of this additional responsibility will arise from limits on authority or funding to provide this additional protection.

The Services have significant resources and authorities that can be utilized to provide additional protection for threatened or endangered species that are the subject of a given HCP including land acquisition or exchange, habitat restoration or enhancement, translocation, and other management techniques. For example, lands managed by the Department of the Interior could be used to ensure listed species protection. Moreover, subsequent section 7 consultations and approval of subsequent section 10 permits will have to take into account the HCP and the status of the species at that time. The section 9 prohibition against unauthorized take by other landowners provides additional protection.

In addition, section 5 of the ESA authorizes the Services to acquire lands to conserve endangered and threatened fish, wildlife, and plants, and section 6

of the ESA authorizes the Services to cooperate with the States in conserving listed species. While many of these programs and authorities are subject to the availability of appropriations, others, such as the authority under the Federal Land Policy and Management Act to exchange land for conservation purposes, do not require appropriations. These authorities provide additional flexibility through which the Services could meet their section 7 responsibilities. While by no means exhaustive, the above discussion demonstrates the depth of authorities and resources available to the Services to meet their No Surprises commitments.

Utilizing these authorities and resources, the Services should be able to provide additional species protection that may be required in the unexpected event that an HCP falls short of providing sufficient protection.

*Issue 4:* Many commenters stated that the proposed regulation violates section 4(b)(8) of the ESA, which requires “\* \* \* the publication in the **Federal Register** of any proposed or final regulation which is necessary or appropriate to carry out the purposes of this ESA shall include a summary by the Secretary of the data on which such regulation is based and shall show the relationship of such data to such regulation \* \* \*”.

*Response 4:* The Services believe section 4(b)(8) is intended to apply only to listing and critical habitat decisions under section 4. However, even if section 4(b)(8) did apply to this rule, the Services have complied with its requirements. The proposed rule contained a thorough discussion of the basis for the proposed rule (62 FR 29091, May 29, 1997). In addition, the Services had previously explained the background of the No Surprises Policy in the draft HCP Handbook, which was published for public comment in the **Federal Register** (59 FR 65782, December 21, 1994).

*Issue 5:* Many commenters believe that the Secretary of the Interior does not have the authority to issue assurances for species covered by the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA).

*Response 5:* The FWS believes that the ESA is more restrictive and protective of species than the MBTA and the BGEPA, and that species covered under an HCP that are also covered by the MBTA and the BGEPA will adequately be protected as long as the HCP is properly implemented. The FWS has concluded that under certain

conditions, a section 10 permit allowing incidental take of listed migratory birds is sufficient to relieve the permittee from liability under the MBTA and BGEPA for taking those species. For the MBTA, this is accomplished by having the HCP permit double as a Special Purpose Permit authorized under 50 CFR 21.27. For the BGEPA, the FWS would exercise its prosecutorial discretion not to prosecute an incidental take permittee under the BGEPA if such take is in compliance with a section 10 permit under the ESA.

However, there are conditions that must be satisfied before either of these protections apply, which are explained on pages 3–40 to 3–41 in the joint Endangered Species Habitat Conservation Planning Handbook (61 FR 63854, December 2, 1996). The FWS believes this approach is warranted because the permittee already would have agreed to an operating conservation program designed to conserve the species and minimize and mitigate the impacts of take of the listed species of migratory birds to the maximum extent practicable. Through the permitting provisions of the MBTA and the FWS's discretion in the enforcement of the BGEPA and the ESA, the FWS has the authority to provide a permittee with assurance that they will not be prosecuted under the MBTA or BGEPA for take expressly allowed under the ESA.

*Issue 6:* Many commenters stated that HCPs with No Surprises assurances are in conflict with the issuance criteria in the ESA because, in the event of unforeseen circumstances, the project impacts may not be fully mitigated and the plan may reduce the survival and recovery of a covered species.

*Response 6:* The assurances provided through this regulation are consistent with the issuance criteria of the ESA. Before issuing a permit, the Services ensure that the applicant minimizes and mitigates the project impacts, to the maximum extent practicable, and that the permitted activities avoid jeopardy to the continued existence of the affected species.

In addition, in cases where significant data gaps exist, adaptive management provisions are included in the HCP. The primary reason for using adaptive management in HCPs is to allow for up-front, mutually agreed upon changes in the operating conservation program that may be necessary in light of subsequently developed biological information. In the event of unforeseen circumstances, these strategies may be redirected as long as the redirection is consistent with the scope of the

mutually agreed-upon adaptive management provisions of the HCP.

*Issue 7:* Many commenters stated that the applicant is legally required to address all unforeseen circumstances in the HCP pursuant to section 10. They noted that fire, disease, drought, flood, global climate change, and non-point source pollution may be unforeseen, but are not uncommon. Also the proposed regulation does not direct the applicant to provide for all unforeseen circumstances that might occur during the length of the permit because it is the Services' responsibility to determine that there was an unforeseen circumstance that was not addressed and is not the fault of the permittee implementing the HCP. In addition, commenters noted that the nature of many of the HCPs that the Services are approving increases the likelihood for unforeseen events to happen (i.e., the permits are issued for many years and cover large areas and many species).

*Response 7:* The Services disagree that HCPs must address *all* hypothetical future events, no matter how remote the probability that they may occur. Rather, the Services believe that only reasonably foreseeable changes in circumstances need to be addressed in an HCP. Moreover, these circumstances are likely to vary from HCP to HCP given the ever changing mix of species and affected habitats covered by a given plan. Nevertheless, the Services agree that the proposed rule's treatment of unforeseen circumstances could be strengthened, and a definition of unforeseen circumstances has been codified in this rule. In particular, the Services would like to clarify that unforeseen circumstances will only include events that could not reasonably have been anticipated. *All reasonably foreseeable circumstances, including natural catastrophes that normally occur in the area, should be addressed in the HCP.* The final rule specifies how unforeseen circumstances will be addressed if they occur during the life of the permit.

*Issue 8:* Commenters believe that the proposed regulation would not allow for social changes that could occur over the lifetime of the permit. For example, they claim that the development and implementation of the Emergency Salvage Timber rider has affected the success of the conservation measures of several HCPs.

*Response 8:* There may be situations that do arise related to social changes that could occur during the lifetime of the permit. In these situations, the Services will use all of their legal authorities to adequately address the changes. The Timber Salvage rider to

the Appropriations bill is actually a good example of how the Administration responded to a change in social policy. On July 27, 1995, the President signed the Rescission Act (Public Law 104–19) that provided funds for disaster relief and other programs. This bill contained provisions for an emergency salvage timber sale, and directed the preparation, offer, and award of timber salvage sales nationwide. Although the bill passed, the President did not support the provision that waived compliance with environmental laws during timber salvage and directed the Secretaries of Agriculture, the Interior and Commerce, and the heads of other agencies, to move forward to implement the timber-related provisions of the bill in an expeditious and environmentally-sound manner. The Services worked with other Federal agencies to develop a process that, as a matter of Administration policy, addressed compliance with all environmental laws while also meeting the requirements of Pub. L. 104–19. An interagency team of Federal agencies then drafted a process that addressed compliance with the ESA through a streamlined section 7 consultation procedure to ensure that these sales did not jeopardize listed species. In this case, the Services and other Federal agencies cooperatively used their administrative discretion and legal authorities to ameliorate adverse impacts upon listed species conservation.

*Issue 9:* Several commenters believe that the proposed No Surprises rule negates adaptive management provisions incorporated into HCPs, and may not allow future jeopardy situations to be addressed, because adaptive management must allow for adaptations to changes as they occur rather than trying to plan for everything up front. In addition, many commenters believe that in order to get No Surprises assurances, an HCP must have an adaptive management program that addresses all foreseeable biological and environmental changes and that is designed so that new applicable scientific information and information developed through a monitoring program is incorporated into the plan.

*Response 9:* The Services do not believe that the proposed rule negates adaptive management provisions incorporated into HCPs for the species with biological data gaps. The No Surprises assurances only apply to an approved HCP that has otherwise satisfied the issuance criteria under section 10(a)(2)(B) of the ESA. When considering permits where there are significant biological data gaps, the

Services have two choices: either deny an HCP permit application due to the inadequacy of the overall proposed plan, or build in adaptive management and monitoring provisions where warranted because of biological data gaps and issue the permit. If there is significant uncertainty associated with the operating conservation program, adaptive management becomes an integral component of the HCP. Incorporating adaptive management provisions into the HCP becomes important to the planning process and the long-term interest of affected species when HCPs cover species with significant biological data gaps. Through adaptive management, the biological objectives of an operating conservation program are defined using techniques such as models of the ecological system that includes its components, interactions, and natural fluctuations. If existing data makes it difficult to predict exactly what conservation and mitigation measures are needed to achieve a biological objective, then an adaptive management approach should be used in the HCP. Under adaptive management, the HCP's operating conservation program can be monitored and analyzed to determine if it is producing the desired results (e.g., properly functioning riparian habitats). If the desired results are not being achieved, then adjustments in the program can be considered through an adaptive management clause of the HCP. Thus, adaptive management can be an integral part of the operating conservation program for an HCP and can be implemented to adjust strategies accordingly. The Services support continuing to strengthen the effectiveness of adaptive management provisions in HCPs and intend to do so in further revisions to the HCP Handbook.

*Issue 10:* Numerous commenters stated that the proposed regulation should identify secured sources of funding that do not rely on appropriations for the implementation of conservation measures that may be needed to address unforeseen circumstances.

*Response 10:* Funding mechanisms of this type would have to be established through Congressional action. Absent Congressional action on this matter, the Services must operate with the fiscal resources otherwise made available to them through the appropriations process. Moreover, in approving an HCP in the first instance, the Services must conclude that the permittee has provided for adequate funding to implement the terms of the HCP.

*Issue 11:* Many commenters stated that the Federal government is not capable of shouldering the financial burden of funding the implementation of conservation measures that may be needed to address unforeseen circumstances. The hardship of paying for any changes needed in the HCP on the government may have severe and far reaching effects on funding for other Federal activities. In addition, some commenters noted that the proposed regulation unlawfully shifts the burden of funding to the Services when section 10 clearly states that the applicant will provide the funding. Numerous commenters stated that the government does not have guaranteed funding for covering unforeseen circumstances and cannot make such guarantees in violation of the Anti-Deficiency Act.

*Response 11:* The ESA requires the Service to find that an incidental take permittee has provided adequate funding to implement an HCP in the first instance. In addition, the Services must ensure that HCPs are designed to adequately mitigate the incidental take authorized by the permit, include measures to deal with unforeseen circumstances that may arise, and comply with such other measures that the Secretary may require as being necessary or appropriate for purposes of the plan. Once the Services have concluded that a permittee has initially satisfied the issuance criteria in section 10(a), there is nothing in the ESA that precludes the Services from assuming additional responsibility for species covered under the terms of an HCP, especially when such responsibilities are limited to highly unlikely unforeseen circumstances. In fact, the Services have responsibility for listed species conservation regardless of whether an HCP is involved or not, and carrying out that responsibility (for example, through the initiation of litigation to enforce section 9 of the ESA) is also dependent upon the availability of appropriated funds. Therefore, at a conceptual level, the lack of guaranteed funding to handle a breakdown of an HCP due to unforeseen circumstances is no different from a lack of guaranteed funding to enforce the ESA generally.

The Anti-Deficiency Act applies to the Services' activities under the ESA as it does to their activities under all other environmental laws. In the face of an unexpected species decline, where additional conservation efforts are warranted, the Services have significant resources at their disposal to address the comparative needs of the species. As noted earlier in Response #3, the Services can also work with Congress,

other Federal, State, and local agencies, tribes, environmental groups, and private entities to help ensure the continued conservation of the species in the wild. The Services have a variety of tools available to ensure that the needs of the species affected by unforeseen circumstances are adequately addressed, including land acquisition or exchange, habitat restoration or enhancement, translocation, and other management techniques. Thus, the Services believe they have a wide array of options and resources available to respond to any unforeseen circumstances.

*Issue 12:* Many commenters noted that many HCPs do not have adequate funding, and the Services must not issue an incidental take permit unless an applicant has secured adequate funding to address all foreseeable changes that might be needed in the conservation measures during the lifetime of the permit. County or State Bonds that are not guaranteed should not be considered "adequate funding."

*Response 12:* Section 10(a)(2)(B)(iii) requires incidental take permit applicants to "ensure that adequate funding for the plan will be provided." This issuance criterion requires that the applicant detail the funding that will be available to implement the proposed operating conservation program. Therefore, all conservation plans specify funding requirements necessary to implement the plan. The Services issue a permit only when they have concluded that the operating conservation program will be adequately funded. No Surprises only applies to an HCP that is being properly implemented, and if a major component of an HCP, like its funding strategy, is never initiated or implemented, then No Surprises no longer applies and the assurances lapse.

The FWS has incorporated provisions into HCPs that allow for a reevaluation of species coverage in case a County or State Bond that is supposed to meet the adequate funding issuance criterion ultimately is not passed. Under these provisions, the list of species authorized for incidental take may be diminished if funding is not in place within a specified time frame, and any incidental take that would occur before the bond measure is acted upon would have to be adequately mitigated up-front. This reevaluation mechanism was used in the Multiple Species Conservation Program for southwestern San Diego County, California. This type of reevaluation process will be incorporated into other HCPs that rely on proposed bonds to provide required funding.

*Issue 13:* Many commenters stated that funding and accountability mechanisms are more complicated for permits that involve third party beneficiaries (e.g., certificates of inclusion), and that these types of permits should not include assurances.

*Response 13:* The Services believe that the assurances provided by the final rule should be available to individuals who participate in HCPs through a larger regional planning process. These large-scale, regional HCPs can significantly reduce the burden of the ESA on small landowners by providing efficient mechanisms for compliance, distributing the economic and logistical impacts of endangered species conservation among the community, and bringing a broad range of landowner activities under the HCPs' legal protection. In addition, these large-scale HCPs allow for ecosystem planning, which can provide benefits to more species than small-scale HCPs. Large-scale HCPs also provide the Services with a better opportunity for analyzing the cumulative effects of the projects, which is more efficient than the piecemeal approach that could result if each landowner developed his/her own HCP. The Services do believe, however, that the party that holds the "overarching" permit, and issues subpermits (e.g., Certificates of Inclusion or Participation Certificates) must have the legal authority to enforce the terms and conditions of the permit and the underlying funding mechanisms for the HCP.

*Issue 14:* Many commenters requested the Services to remove the permit-shield provision from the proposed regulation because it improperly restricts the authority of the Secretary and citizens to enforce the requirements of the ESA. These commenters assert that the Services do not have the authority to prevent citizens from suing those who are in violation of the ESA. One commenter stated that the permit-shield provision lacks important limitations found in other permit-shield provisions, such as the Clean Water Act and Resource Conservation and Recovery Act. Commenters also stated that the proposed permit-shield provision conflicts with the citizen suit provision in section 11(g) of the ESA. Other commenters supported the proposed permit-shield provision and urged the Service to incorporate it into the final rule. These commenters believe failure to include a permit-shield provision would undercut the No Surprises assurances by exposing permit holders to potential enforcement actions even if they are complying fully with the terms and conditions of valid permits.

*Response 14:* After further review of the permit-shield concept, including a review of legal authorities, the Services have decided not to include a legally binding permit-shield provision in the final rule. The purpose of the permit-shield provision was to provide certainty to permittees regarding their legal obligations. The current statutory and regulatory framework appears to already provide permittees with that certainty. Although commenters stated that a permit holder might still be vulnerable to government-initiated enforcement actions notwithstanding the No Surprises assurances, the Services cannot identify situations in which a permittee would be in violation of Sections 9 or 11 of the ESA, if in fact they were acting within the permit's authorization and were complying with the terms and conditions of the permit.

In addition, as part of the review of legal authorities, the Services reviewed the court decision in *Shell Oil Company v. Environmental Protection Agency*, 950 F.2d 741, 761-765 (D.C. Cir. 1991), which addressed the legality of the Environmental Protection Agency's permit-shield rule for permits issued under the Resource Conservation and Recovery Act (RCRA). Although that decision upheld the RCRA permit-shield rule promulgated by the EPA, 40 CFR 270.4(a), the Services are concerned that the incidental take permit program is sufficiently different from the RCRA permit program that the *Shell Oil* decision may not support a permit-shield rule for incidental take permits. For instance, the court noted that the maximum term of RCRA permits is 10 years, which is considerably shorter than the terms of most incidental take permits. In addition, the EPA retains explicit authority to modify or terminate RCRA permits in response to information arising after a permit is issued that would have justified different permit terms had it existed when the permit was issued. In contrast, the No Surprises rule commits the Service to issue permits that do not require additional land, water, or financial compensation or additional restrictions on the use of land, water, or other natural resources if unforeseen circumstances arise.

Although the Services have decided not to include a legally binding permit-shield provision in the final rule, they nonetheless strongly support a policy that permittees should feel free of potential prosecution if they are acting under the authorizations of their permit and are complying with the terms and conditions of the permit. The Services therefore will continue their policy of not enforcing the prohibitions of Section

9 of the ESA against any incidental take permittee who complies fully with the terms and conditions of the permit.

Many commenters requested that the Services remove the permit-shield provision from the proposed regulation because it improperly restricts the authority of citizens to enforce the requirements of the ESA. The purpose of the proposed permit-shield provision was to provide that the Services would not utilize Section 11(e) of the ESA to enforce Section 9 prohibitions against a permittee who is in full compliance with the terms and conditions of a permit. The permit-shield provision would not, therefore, have restricted citizen suits.

*Issue 15:* Commenters believe that the regulatory assurances provided to the permittee deprive citizens of the right to have general oversight of HCPs, including challenging government's management decisions, guaranteeing that landowners are in compliance with the agreements, and ensuring that the plans are actually working to conserve listed species.

*Response 15:* The No Surprises assurances do not deprive citizens of HCP oversight or of their ability to challenge an improperly issued HCP permit. In addition, all Service decision documents (such as approval of HCP management plans) are part of the Administrative Record for any individual HCP and are available to any member of the public upon request. Nothing in this rule prevents citizens from challenging the adequacy of those decisions or bringing HCP permit terms and conditions compliance issues to the Services' attention. The Services welcome citizen input on HCP implementation. Public comments must be considered in all permit decisions. Providing No Surprises assurances to an HCP permittee does not eliminate this public comment period. In addition, the Services or any party designated as responsible by the Services (e.g., State wildlife agency, local government) in the HCP will be expected to monitor the project for compliance with the terms of the incidental take permit and HCP. The Services also require periodic reporting from the permittee in order to maintain oversight to ensure the implementation of the HCP's terms and conditions. The final rule does nothing to affect these reporting requirements.

*Issue 16:* Numerous commenters stated that the proposed regulation should provide for permits to contain a reopener clause. Any entity (e.g., landowners, government agencies, ecologists, environmentalists) would then be able to reopen the permit for any of the following reasons: 1) Any

party fails to implement the terms and conditions of the permit; (2) new listings of any species not covered; and (3) monitoring indicates that conservation goals are not being met and that the operating conservation program is ineffective.

*Response 16:* The HCP process already provides various mechanisms for reopening an HCP. First, the Services may suspend, or in certain circumstances, revoke all or part of the privileges authorized by a permit if the permittee does not comply with the terms and conditions of the permit or with applicable laws and regulations governing the permitted activity. If an HCP permit is suspended or revoked, incidental take must cease. The provisions of most HCPs expressly address permit suspension or revocation procedures. Second, if a species was not initially listed on an HCP permit, it may not be automatically covered by an HCP when subsequently listed. For example, if a species was not originally listed on a permit, the HCP must be formally amended. Amendment of a section 10(a)(1)(B) permit is also required when the permittee wishes to significantly modify the project, activity, or conservation program as described in the original HCP. Such modifications might include significant boundary revisions, alterations in funding or schedule, or an addition of a species to the permit that was not addressed in the original HCP. The Services encourage the public to provide them with applicable information concerning any approved HCP that would be useful in evaluating the effectiveness of the HCP or other concerns they may have.

*Issue 17:* Numerous commenters stated that the assurances provided through these proposed regulations should not be automatic and should be commensurate with risk, and that the Services should provide assurances to a permittee only if the HCP includes specific objectives or measurable biological goals that must be met and that would ensure the conservation of the species, if they are attained.

*Response 17:* The Services believe that the commitments of an HCP must be specifically identified and scientifically based, reflecting the particular needs of the species that are covered. Thus, the concept of comparative risk to various species is factored in by the Services as they assess the adequacy of the operating conservation program for a given HCP. The Services will not approve an HCP permit request found to be inadequate, but will provide No Surprises assurances to all HCPs that are found to be adequate.

For many recent HCPs, the Services are defining specific biological goals. Furthermore, comprehensive monitoring programs provide added value for measuring progress toward meeting the goals and commitments and ensuring that the permittee is in compliance with the permit. The Services often incorporate monitoring measures to assess whether goals are being met, especially in cases where additional information may be desirable or there is significant scientific uncertainty. If existing data makes it difficult to predict exactly what measures are needed to achieve a biological objective, then an adaptive management strategy is usually required. Adaptive management, which then becomes an integral component of the operating conservation program, is not negated by the No Surprises assurances because it was a part of the HCP's operating conservation program as approved by the Services.

*Issue 18:* Most commenters stated that to get assurances, a multispecies HCP must adequately cover each individual species rather than collectively cover a group of species defined by some type of commonality (e.g., guild or habitat).

*Response 18:* The Services believe that each species in a multispecies HCP must be adequately addressed by satisfying the permit issuance criteria under section 10(a)(2)(B) of the ESA. The Services believe, nevertheless, that in some cases, using a "guilding" or habitat-based approach to craft preserve designs or management measures may be appropriate.

However, even when such tools are used, the Services will ensure that for each species that receives assurances, the species must be specifically named in the HCP, and adequate conservation measures are included in the plan.

*Issue 19:* Commenters believe that to get assurances, an HCP must have an adequate and comprehensive biological monitoring program that addresses all foreseeable changes in circumstances that may occur over the lifetime of the permit.

*Response 19:* Monitoring is already an element of HCPs under the Services' Federal regulations [50 CFR 17.22(b)(1), 17.32(b)(1), and 222.22]. Monitoring is also an important tool for HCPs, and their associated permit and Implementing Agreements, and should be properly designed and implemented. The scope of the monitoring program should be sufficient to address reasonably foreseeable changes in circumstances that occur during the life of the permit. Monitoring is needed to obtain the information necessary to properly assess the impacts from the

HCP and to ensure that HCPs are properly implemented. Monitoring will also allow the use of the scientific data obtained on the effects of the plan's operating conservation program to modify specific strategies through adaptive management, and to enhance future strategies for the conservation of species and their habitat.

While the Services appreciate the numerous benefits of a well-developed monitoring program, some low-effect HCPs have minimal monitoring requirements because the impacts from the plan are minor or negligible, and the attempt by the commenters to make an extensive monitoring program a requirement for No Surprises assurances is misplaced. A well-developed monitoring program will add to the credibility of an HCP proposal and will facilitate the eventual approval of the HCP. Thus, the Services believe that the real test for receiving the No Surprises assurances should be whether the issuance criteria under section 10(a) have been satisfied, and not whether a particular conservation tool, such as monitoring, has been extensively employed under an HCP whether it is needed or not.

*Issue 20:* Numerous commenters stated that to get assurances for unlisted species, a plan must be in place that describes what is necessary for their long-term conservation. Commenters encouraged a standard for unlisted species equal to that used in the proposed policy and regulations for the Candidate Conservation Agreements (CCAs).

*Response 20:* While the Services agree that these two types of agreements are similar, the purposes of the proposed CCA policy and the No Surprises rule are somewhat different. As stated in the proposed CCA policy, the ultimate goal of these agreements is to encourage landowners and State and local land managing agencies to manage their lands in a manner that, if adopted on a broad enough scale by similarly situated landowners, would remove threats to species and thereby obviate the need to list them under the ESA. The purposes of including unlisted species in HCPs and of making them subject to No Surprises assurances, are to enlist landowners in efforts to conserve these species and to provide certainty to landowners who are willing to make long-term commitments to the conservation of listed and unlisted species that they will not be subjected to additional conservation and mitigation measures if one of the species is listed, except as provided in their HCPs. The standards for including an unlisted species under an HCP are the

issuance criteria under section 10(a)(2)(B) of the ESA. For HCPs, the Services will continue to use the conservation standard identified in the Habitat Conservation Planning Handbook for unlisted species. The Handbook clearly states that an unlisted species is "adequately covered" in an HCP only if it is treated as if it were listed pursuant to section 4 of the ESA, and if the HCP meets the permit issuance criteria in section 10(a)(2)(B) of the ESA with respect to the species. The No Surprises assurances apply only to species (listed and unlisted) that are adequately covered in the HCP. Species, whether listed or nonlisted, will not be included in the HCP permit if data gaps or insufficient information make it impossible to craft conservation and mitigation measures for them, unless these data gaps can be overcome through the inclusion of adaptive management clauses in the HCP.

*Issue 21:* Many commenters requested an addition to the rule that would address the early termination of an HCP. Commenters want the Services to discuss the possibility of terminating an HCP, including how the assurances and applicable mitigation apply to the termination.

*Response 21:* The Services believe that such a requested change is unnecessary. The No Surprises assurances apply during the life of the permit, provided that the HCP is properly implemented and the terms and conditions of the HCP incidental take permit are being followed. Should a permit be terminated early, the No Surprises assurances also terminate as of the same date. The question of how outstanding mitigation responsibilities should be handled upon early termination is a more generic HCP policy issue that is unrelated to the No Surprises assurances and is, therefore, beyond the scope of this particular rulemaking.

*Issue 22:* Several commenters stated that the proposed rule was confusing regarding the different level of assurances established in the proposed rule (for regular HCPs and for HCPs that provide a "net benefit" to the covered species) and that the distinction between the two levels should be clarified further or only one level of assurances should be provided to HCP permittees.

*Response 22:* The Services agree that these distinctions were unnecessarily confusing and have revised the final rule accordingly. The final rule requires the Services to provide only one level of assurances to any permittee that has an approved HCP permit. The Services eliminated the level of assurances for

HCPs that were developed to provide a net benefit for the covered species since the distinction between the two types of HCPs were very difficult to delineate in practice.

*Issue 23:* Commenters noted that there were differences between the regulations, such as FWS use of the term "unforeseen" circumstances throughout the proposed rule, whereas NMFS used the terms "unforeseen" and "extraordinary" circumstances in their proposed rule.

*Response 23:* The Services agree that there was some confusion and have made the regulations consistent between the two agencies, where possible. Moreover, there was never an intention in the August 1994 No Surprises announcement to create a substantive difference between "unforeseen" and "extraordinary" circumstances. NMFS will use the term "unforeseen" in its regulations in place of "extraordinary."

#### Revisions to the Proposed Rule

The following represents a summary of the revisions to the proposed rule as a result of the consideration of the public comments received during this rulemaking process. The Services have rewritten the "Assurances" section of the preamble and regulatory language to improve clarity and readability. Many commenters were confused by the language in the proposed rule, and asked the Services to provide a clearer explanation of this section. Accordingly, the Services have edited and reorganized the Assurances provision, but have not made any substantive changes.

(1) Some of the definitions used in this rulemaking process will now be codified as definitions in 50 CFR 17.3 for FWS and 50 CFR 222.3 for NMFS. These definitions were concepts identified in the "Background" section of the proposed rule.

(2) The rule was revised so the Services will only provide assurances for species listed on a permit that are adequately covered in the conservation plan and specifically identified on the permit.

(3) The Services have clarified that the duration of the assurances is the same as the length of the permit.

(4) The Services revised the rule so that there is only one level of assurances provided to permittees, instead of one level of assurances for standard HCPs and another level for HCPs that were developed to provide a "net benefit" for the covered species.

(5) The Services have clarified the rule so that it is apparent that No Surprises assurances do not apply to Federal agencies who have a continuing

obligation to contribute to the conservation of threatened and endangered species under section 7(a)(1) of the ESA.

(6) The Services believe that HCPs are, and will continue to be, carefully crafted so that unforeseen circumstances will be rare, if at all, and that the Services will be able to successfully handle any unforeseen circumstance so that species are not jeopardized. To help ensure that unforeseen circumstances are a rare occurrence, the Service revised the rule in appropriate areas.

(7) The Services replaced the term "properly functioning," which was used in the proposed rule to "properly implemented." This change accurately reflects the intent of the Services when discussing the implementation of HCPs.

(8) The Services eliminated the permit-shield provisions from the final rule.

(9) The Services revised the final rule by replacing the term "property interests" with the term "natural resources," which more accurately describes the intent of the Services.

#### Description/Overview of the Final Habitat Conservation Plan Assurances ("No Surprises" Policy) Rule

The information presented below briefly describes the "No Surprises" assurances adopted in this final rule. These assurances provide economic and regulatory certainty for non-Federal property owners that participate in the ESA's section 10(a)(1)(B) permitting process through the following:

1. *General assurances.* The No Surprises assurances apply only to incidental take permits issued in accordance with the requirements of the Services' regulations where the conservation plan is being properly implemented, and apply only to species adequately covered by the conservation plan.

*Discussion:* Once an HCP permit has been issued and its terms and conditions are being fully complied with, the permittee may remain secure regarding the agreed upon cost of conservation and mitigation. If the status of a species addressed under an HCP unexpectedly worsens because of unforeseen circumstances, the primary obligation for implementing additional conservation measures would be the responsibility of the Federal government, other government agencies, or other non-Federal landowners who have not yet developed an HCP.

"Adequately covered" under an HCP for listed species refers to any species addressed in an HCP that has satisfied the permit issuance criteria under section 10(a)(2)(B) of the ESA. For

unlisted species, the term refers to any species that is addressed in an HCP as if it were listed pursuant to section 4 of the ESA and is adequately covered by HCP conditions that would satisfy permit issuance criteria under section 10(a)(2)(B) of the ESA if the species were actually listed. For a species to be covered under a HCP it must be listed on the section 10(a)(1)(B) permit. These assurances apply *only* to species that are "adequately covered" in the HCP.

"Properly implemented conservation plan" means any HCP, Implementing Agreement, and permit whose commitments and provisions have been and are being fully implemented by the permittee and in which the permittee is in full compliance with the terms and conditions of the permit, so the HCP is consistent with the agreed-upon operating conservation program for the project.

*2. Changed circumstances provided for in the plan.* If additional conservation and mitigation measures are deemed necessary to respond to changes in circumstances that were provided for in the plan's operating conservation program, the permittee will be expected to implement the measures specified in the plan.

*3. Changed circumstances not provided for in the plan.* If additional conservation and mitigation measures are deemed necessary to respond to changed circumstances that were not provided for in the plan's operating conservation program, the Services will not require any conservation and mitigation measures in addition to those provided for in the plan without the consent of the permittee, provided the plan is being properly implemented.

*Discussion:* It is important to distinguish between "changed" and "unforeseen" circumstances. Many changes in circumstances during the course of an HCP can reasonably be anticipated and planned for in the conservation plan (e.g., the listing of new species, or a fire or other natural catastrophic event in areas prone to such events), and the plans should describe the modifications in the project or activity that will be implemented if these circumstances arise. "Unforeseen circumstances" are changes in circumstances affecting a species or geographic area covered by an HCP that could not reasonably have been anticipated by plan developers or the Services at the time of the HCP's negotiation and development, and that result in a substantial and adverse change in the status of a covered species (e.g., the eruption of Mount St. Helens was not reasonably foreseeable).

*4. Unforeseen circumstances.* In negotiating unforeseen circumstances,

the Services will not require without the consent of the permittee, the commitment of additional land, water or financial compensation or additional restrictions on the use of land, water, including quantity and timing of delivery, or other natural resources beyond the level otherwise agreed upon for the species covered by the conservation plan.

If additional conservation and mitigation measures are deemed necessary to respond to unforeseen circumstances, the Services may require additional measures of the permittee where the conservation plan is being properly implemented, but only if such measures are limited to modifications within conserved habitat areas, if any, or to the conservation plan's operating conservation program for the affected species, and maintain the original terms of the conservation plan to the maximum extent possible. Additional conservation and mitigation measures will not involve the commitment of additional land, water or financial compensation or restrictions on the use of land, water (including quantity and timing of delivery), or other natural resources otherwise available for development or use under the original terms of the conservation plan, without the consent of the permittee.

In determining unforeseen circumstances, the Services will have the burden of demonstrating that such unforeseen circumstances exist, using the best scientific and commercial data available. These findings must be clearly documented and based upon reliable technical information regarding the status and habitat requirements of the affected species. The Services will consider, but not be limited to, the following factors: size of the current range of the affected species; percentage of range adversely affected by the conservation plan; percentage of range conserved by the conservation plan; ecological significance of that portion of the range affected by the conservation plan; level of knowledge about the affected species and the degree of specificity of the species' conservation program under the conservation plan; and whether failure to adopt additional conservation measures would appreciably reduce the likelihood of survival and recovery of the affected species in the wild.

*Discussion:* The first criterion is self-explanatory. The second identifies factors to be considered by the Services in determining whether the unforeseen circumstances are biologically significant. Generally, the inquiry would focus on the level of biological threats to the affected species covered by the HCP and the degree to which the

welfare of those species is tied to a particular HCP. For example, if a species is declining rapidly, and the HCP encompasses an ecologically insignificant portion of the species' range, then unforeseen circumstances warranting reconsideration of an HCP's conservation program typically would not exist because the overall effect of the HCP upon the species would be negligible or insignificant. Conversely, if a species is declining rapidly and the HCP in question encompasses a majority of the species' range, then unforeseen circumstances warranting a review of an HCP's conservation program probably would exist. If unforeseen circumstances are found to exist, the Services will consider changes in the operating conservation program or additional mitigation measures. However, measures required of the permittee must be as close as possible to the terms of the original HCP and must be limited to modifications within any conserved habitat area or to adjustments within lands or waters that are already set aside in the HCP's operating conservation program. "Conserved habitat areas" are areas explicitly designated for habitat restoration, acquisition, protection, or other conservation uses under an HCP. An "operating conservation program" consists of the conservation management activities, which are expressly agreed upon and described in an HCP or its Implementing Agreement and that are undertaken for the affected species when implementing an approved HCP. Any adjustments or modifications will not include requirements for additional land, water, or financial compensation, or additional restrictions on the use of land, water (including quantity and timing of delivery), or other natural resources otherwise available for development or use under the HCP, unless the permittee consents to such additional measures.

Modifications within conserved habitat areas or to the HCP's operating conservation program means changes to the plan areas explicitly designated for habitat protection or other conservation uses under the HCP, or changes that increase the effectiveness of the HCP's operating conservation program, provided that any such changes do not impose new restrictions or require additional financial compensation on the permittee's activities. Thus, if an HCP's operating conservation program originally included a mixture of predator depredation control and captive breeding, but subsequent

research or information demonstrated that one of these was considerably more effective than the other, the Services would be able to request an adjustment in the proportionate use of these tools, provided that such an adjustment did not increase the overall costs to the HCP permittee. Additionally, the No Surprises assurance does not preclude any Federal agency from exercising its Federal reserved water rights.

The "Unforeseen circumstances" section of the HCP should discuss the process for addressing those future changes in circumstances surrounding the HCP that could not reasonably be anticipated by HCP planners. While HCP permittees will not be responsible for bearing any additional economic burden for more mitigation measures, other methods remain available to respond to the needs of the affected species and to assure that the goals of the ESA are satisfied. These include increasing the effectiveness of the HCP's operating conservation program by adjusting the program in a way that does not result in a net increase in costs to the permittee, and actions taken by the government or voluntary conservation measures taken by the permittee.

When negotiating the unforeseen provisions in an HCP, the permittee cannot be required to commit additional land, funds, or additional restrictions on lands, water (including quantity and timing of delivery) or other natural resources released under an HCP for development or use from any permittee who is implementing the HCP and is abiding by all of the permit terms and conditions in good faith or has fully implemented their commitments under an approved HCP. Moreover, this rule does not preempt or affect any Federal reserved water rights.

In the event of unforeseen circumstances, the Services will work with the permittee to increase the effectiveness of the HCP's operating conservation program to address the unforeseen circumstances without requiring the permittee to provide an additional commitment of resources as stated above. The specific nature of the requested changes to the operating conservation program will vary among HCPs depending upon individual habitat and species needs.

5. Nothing in this rule will be construed to limit or constrain the Services, any Federal, State, local, or Tribal government agency, or a private entity, from taking additional actions at its own expense to protect or conserve a species included in a conservation plan.

*Discussion:* This means the Services or other entities can intervene on behalf

of a species at their own expense at any time and be consistent with the assurances provided to the permittee under this final rule. However, it is unlikely that the Services would have to resort to protective or conservation action requiring new appropriations of funds by Congress in order to meet their commitment under this final rule (consistent with their obligations under the ESA). If this unlikely event occurred, these actions would be subject to the requirements of the Anti-Deficiency Act and the availability of funds appropriated by Congress.

Also, nothing in this final rule prevents the Services from asking a permittee to voluntarily undertake additional mitigation on behalf of affected species. While an HCP permittee who has been implementing the HCP and permit terms and conditions in good faith would not be obligated to provide additional mitigation, the Services believe that many landowners would be willing to consider additional conservation assistance on a voluntary basis if a compelling argument for assistance could be made.

The Services believe that it will be rare for unforeseen circumstances to result in a jeopardy situation. However, in such cases, the Services will use all of their authorities, will work with other Federal agencies to rectify the situation, and work with the permittee to redirect conservation and mitigation measures so as to offset the likelihood of jeopardy. The Services have a wide array of authorities and resources that can be used to provide additional protection for threatened or endangered species covered by an HCP.

#### **Required Determinations**

A major purpose of this final rule is to provide section 10(a)(1)(B) permittees regulatory assurances related to the issuance of an HCP permit. From the Federal government's perspective, implementation of this rule would not result in additional expenditures to the permittee that are above and beyond that already required through the section 10(a)(1)(B) permitting process. There are, however, benefits derived from HCPs for both the non-Federal permittees and the species covered by the HCPs. HCPs are mechanisms that allow non-Federal entities to continue with economic use or development activities, while factoring species' conservation needs into natural resource management decisions. Benefits to the covered species may include the conservation of lands and waters upon which the species depends, decreased habitat fragmentation, the removal of

threats to candidate, proposed, or other unlisted species, and in various instances, advancement of the recovery of listed species. Non-Federal entities are then provided regulatory assurances pursuant to an approved incidental take permit under section 10(a)(1)(B) of the ESA for those species that are adequately covered by the permit, conditioned, of course, on the proper implementation of the HCP. Since the Habitat Conservation Plan Assurances ("No Surprises" policy) impose no additional economic costs or burdens upon an HCP permittee, the Services have determined that the final rule would not result in significant costs of implementation to non-Federal entities.

#### **Information Collection/Paperwork Reduction Act**

No significant effects are expected on non-Federal entities exercising their option to enter into the HCP planning program because there is no additional information required during the HCP development or processing phase due solely to these regulatory assurances.

The Services have examined this final rule under the Paperwork Reduction Act of 1995 and found it to contain no requests for additional information or increase in the collection requirements associated with incidental take permits other than those already approved for incidental take permits with OMB approval #1018-0094, which has an expiration date of February 28, 2001.

#### **Economic Analysis**

This final rule was subject to Office of Management and Budget review under Executive Order 12866. However, the Services have determined that there will be no additional costs placed on the non-Federal entity associated with this final regulation. The No Surprises policy, which was drafted in 1994, went through a public comment period as part of the draft *1994 Habitat Conservation Planning Handbook* (59 FR 65782, December 21, 1994), was included in the final *1996 Habitat Conservation Planning Handbook* (61 FR 63854, December 2, 1996), and currently is being implemented in individual HCP permits as they are issued after an opportunity for public comment. The No Surprises assurances provided to permittees through these final rules apply to the HCP permitting process only, and the Services have determined that there will be no additional information required of non-Federal entities through the HCP permitting process to provide assurances to the permittee.

The Department of the Interior has certified that this rulemaking will not

have a significant economic impact on a substantial number of small entities, which includes businesses, organizations, or governmental jurisdictions. This final rule will provide non-Federal entities regulatory certainty pursuant to an approved incidental take permit under section 10(a)(1)(B) of the Act. No significant effects are expected on non-Federal entities exercising their option to enter into the HCP planning program because there will be no additional information required through the HCP process due to the application of assurances or "No Surprises." Therefore, this rule would have a minimal effect on such entities. NMFS has also reviewed this rule under the Regulatory Flexibility Act of 1980 and concurs with the above certification.

The implementation of the final Habitat Conservation Plan Assurances rule does not require any additional data not already required by the HCP process. Regulatory assurances are provided to the permittee if the HCP is properly implemented, and if all the terms and conditions of the HCP, permit, or Implementing Agreement are all being met. The underlying economic basis of comparing the final rule with and without the assurances was used to determine if there existed any potential economic effects from implementing this policy. Since the rule is being implemented with existing data, there are no incremental costs being imposed on non-Federal landowners. The benefits generated by this rule are being shared by the Services (i.e., less habitat fragmentation, habitat management, and protection for covered species) and by non-Federal landowners (i.e., assurances that approved HCPs will allow for future economic uses of non-Federal land without further conservation and mitigation measures).

There are no specific data to assess the effects on businesses from this rule. To the extent businesses are affected, however, such effects would be positive, not negative. Until specific HCPs are approved, it is not possible to determine effects on commodity prices, competition or jobs. Moreover, any economic effects would likely be tied to the cost of the development and implementation of the HCP itself and not to these assurances. There is a positive effect expected on the environment because these assurances act as an incentive for non-Federal entities to seek HCPs and to factor species conservation needs into national resources management decisions. No effect on public health and safety is expected from this rule. Therefore, this rule most likely would not have a

significant effect on a substantial number of small entities.

The Services have determined and certify pursuant to the Unfunded Mandates Act, 2 U.S.C. 1502 *et seq.*, that this rulemaking will not impose a cost of \$100 million or more in any given year on local or State governments or private entities. No additional information will be required from a non-Federal entity solely as a result of these assurances.

**Civil Justice Reform**

The Departments have determined that these final regulations meet the applicable standards provided in sections 3(a) and 3(b)(2) of Executive Order 12988.

**National Environmental Policy Act**

The Department has determined that the issuance of the final rule is categorically excluded under the Department of the Interior's NEPA procedures in 516 DM 2, Appendix 1.10. NMFS concurs with the Department of Interior's determination that the issuance of the final rule qualifies for a categorical exclusion and falls within the categorical exclusion criteria in NOAA 216-3 Administrative Order, Environmental Review Procedure.

**List of Subjects**

**50 CFR Part 17**

Endangered and threatened species, Exports, Imports, Reporting and recordkeeping requirements, Transportation.

**50 CFR Part 222**

Administrative practices and procedure, Endangered and threatened species, Exports, Imports, Reporting and recordkeeping requirements, Transportation.

For the reasons set out in the preamble, the Services amend Title 50, Chapter I, subchapter B; and Title 50, Chapter II, subchapter C of the Code of Federal Regulations, as set forth below:

**PART 17—[AMENDED]**

**Subpart C—Endangered Wildlife**

1. The authority citation for part 17 continues to read as follows:

**Authority:** 16 U.S.C. 1361-1407; 16 U.S.C. 1531-1544; 16 U.S.C. 4201-4245; Pub. L. 99-625, 100 Stat. 3500; unless otherwise noted.

2. The FWS amends § 17.3 by adding the following definitions alphabetically to read as follows:

\* \* \* \* \*

**Adequately covered** means, with respect to species listed pursuant to

section 4 of the ESA, that a proposed conservation plan has satisfied the permit issuance criteria under section 10(a)(2)(B) of the ESA for the species covered by the plan, and, with respect to unlisted species, that a proposed conservation plan has satisfied the permit issuance criteria under section 10(a)(2)(B) of the ESA that would otherwise apply if the unlisted species covered by the plan were actually listed. For the Services to cover a species under a conservation plan, it must be listed on the section 10(a)(1)(B) permit.

\* \* \* \* \*

**Changed circumstances** means changes in circumstances affecting a species or geographic area covered by a conservation plan that can reasonably be anticipated by plan developers and the Service and that can be planned for (e.g., the listing of new species, or a fire or other natural catastrophic event in areas prone to such events).

**Conserved habitat areas** means areas explicitly designated for habitat restoration, acquisition, protection, or other conservation purposes under a conservation plan.

**Conservation plan** means the plan required by section 10(a)(2)(A) of the ESA that an applicant must submit when applying for an incidental take permit. Conservation plans also are known as "habitat conservation plans" or "HCPs."

\* \* \* \* \*

**Operating conservation program** means those conservation management activities which are expressly agreed upon and described in a conservation plan or its Implementing Agreement, if any, and which are to be undertaken for the affected species when implementing an approved conservation plan, including measures to respond to changed circumstances.

\* \* \* \* \*

**Properly implemented conservation plan** means any conservation plan, Implementing Agreement and permit whose commitments and provisions have been or are being fully implemented by the permittee.

\* \* \* \* \*

**Unforeseen circumstances** means changes in circumstances affecting a species or geographic area covered by a conservation plan that could not reasonably have been anticipated by plan developers and the Service at the time of the conservation plan's negotiation and development, and that result in a substantial and adverse

change in the status of the covered species.

\* \* \* \* \*

3. The FWS amends § 17.22 by adding paragraphs (b) (5) and (6) to read as follows:

**§ 17.22 Permits for scientific purposes, enhancement of propagation or survival, or for incidental taking.**

\* \* \* \* \*

(b) \* \* \*

(5) *Assurances provided to permittee in case of changed or unforeseen circumstances.* The assurances in this paragraph (b)(5) apply only to incidental take permits issued in accordance with paragraph (b)(2) of this section where the conservation plan is being properly implemented, and apply only with respect to species adequately covered by the conservation plan. These assurances cannot be provided to Federal agencies. This rule does not apply to incidental take permits issued prior to March 25, 1998. The assurances provided in incidental take permits issued prior to March 25, 1998 remain in effect, and those permits will not be revised as a result of this rulemaking.

(i) *Changed circumstances provided for in the plan.* If additional conservation and mitigation measures are deemed necessary to respond to changed circumstances and were provided for in the plan's operating conservation program, the permittee will implement the measures specified in the plan.

(ii) *Changed circumstances not provided for in the plan.* If additional conservation and mitigation measures are deemed necessary to respond to changed circumstances and such measures were not provided for in the plan's operating conservation program, the Director will not require any conservation and mitigation measures in addition to those provided for in the plan without the consent of the permittee, provided the plan is being properly implemented.

(iii) *Unforeseen circumstances.* (A) In negotiating unforeseen circumstances, the Director will not require the commitment of additional land, water, or financial compensation or additional restrictions on the use of land, water, or other natural resources beyond the level otherwise agreed upon for the species covered by the conservation plan without the consent of the permittee.

(B) If additional conservation and mitigation measures are deemed necessary to respond to unforeseen circumstances, the Director may require additional measures of the permittee where the conservation plan is being properly implemented, but only if such

measures are limited to modifications within conserved habitat areas, if any, or to the conservation plan's operating conservation program for the affected species, and maintain the original terms of the conservation plan to the maximum extent possible. Additional conservation and mitigation measures will not involve the commitment of additional land, water or financial compensation or additional restrictions on the use of land, water, or other natural resources otherwise available for development or use under the original terms of the conservation plan without the consent of the permittee.

(C) The Director will have the burden of demonstrating that unforeseen circumstances exist, using the best scientific and commercial data available. These findings must be clearly documented and based upon reliable technical information regarding the status and habitat requirements of the affected species. The Director will consider, but not be limited to, the following factors:

(1) Size of the current range of the affected species;

(2) Percentage of range adversely affected by the conservation plan;

(3) Percentage of range conserved by the conservation plan;

(4) Ecological significance of that portion of the range affected by the conservation plan;

(5) Level of knowledge about the affected species and the degree of specificity of the species' conservation program under the conservation plan; and

(6) Whether failure to adopt additional conservation measures would appreciably reduce the likelihood of survival and recovery of the affected species in the wild.

(6) Nothing in this rule will be construed to limit or constrain the Director, any Federal, State, local, or Tribal government agency, or a private entity, from taking additional actions at its own expense to protect or conserve a species included in a conservation plan.

**Subpart D—Threatened Wildlife**

4. The FWS amends § 17.32 by adding paragraphs (b)(5) and (6) to read as follows:

**§ 17.32 Permits—general.**

\* \* \* \* \*

(b) \* \* \*

(5) *Assurances provided to permittee in case of changed or unforeseen circumstances.* The assurances in this paragraph (b)(5) apply only to incidental take permits issued in accordance with

paragraph (b)(2) of this section where the conservation plan is being properly implemented, and apply only with respect to species adequately covered by the conservation plan. These assurances cannot be provided to Federal agencies. This rule does not apply to incidental take permits issued prior to [insert 30 days after the date of publication in the **Federal Register**]. The assurances provided in incidental take permits issued prior to [insert 30 days after the date of publication in the **Federal Register**] remain in effect, and those permits will not be revised as a result of this rulemaking.

(i) *Changed circumstances provided for in the plan.* If additional conservation and mitigation measures are deemed necessary to respond to changed circumstances and were provided for in the plan's operating conservation program, the permittee will implement the measures specified in the plan.

(ii) *Changed circumstances not provided for in the plan.* If additional conservation and mitigation measures are deemed necessary to respond to changed circumstances and such measures were not provided for in the plan's operating conservation program, the Director will not require any conservation and mitigation measures in addition to those provided for in the plan without the consent of the permittee, provided the plan is being properly implemented.

(iii) *Unforeseen circumstances.* (A) In negotiating unforeseen circumstances, the Director will not require the commitment of additional land, water, or financial compensation or additional restrictions on the use of land, water, or other natural resources beyond the level otherwise agreed upon for the species covered by the conservation plan without the consent of the permittee.

(B) If additional conservation and mitigation measures are deemed necessary to respond to unforeseen circumstances, the Director may require additional measures of the permittee where the conservation plan is being properly implemented, but only if such measures are limited to modifications within conserved habitat areas, if any, or to the conservation plan's operating conservation program for the affected species, and maintain the original terms of the conservation plan to the maximum extent possible. Additional conservation and mitigation measures will not involve the commitment of additional land, water or financial compensation or additional restrictions on the use of land, water, or other natural resources otherwise available for development or use under the original

terms of the conservation plan without the consent of the permittee.

(C) The Director will have the burden of demonstrating that such unforeseen circumstances exist, using the best scientific and commercial data available. These findings must be clearly documented and based upon reliable technical information regarding the status and habitat requirements of the affected species. The Director will consider, but not be limited to, the following factors:

(1) Size of the current range of the affected species;

(2) Percentage of range adversely affected by the conservation plan;

(3) Percentage of range conserved by the conservation plan;

(4) Ecological significance of that portion of the range affected by the conservation plan;

(5) Level of knowledge about the affected species and the degree of specificity of the species' conservation program under the conservation plan; and

(6) Whether failure to adopt additional conservation measures would appreciably reduce the likelihood of survival and recovery of the affected species in the wild.

(6) Nothing in this rule will be construed to limit or constrain the Director, any Federal, State, local, or Tribal government agency, or a private entity, from taking additional actions at its own expense to protect or conserve a species included in a conservation plan.

## PART 222—ENDANGERED FISH OR WILDLIFE

5. The authority citation for part 222 is revised to read as follows:

**Authority:** 16 U.S.C. 1531–1543 and 16 U.S.C. 1361 *et seq.*

### Subpart C—Endangered Fish or Wildlife Permits

6. In part 222, a new section is added to read as follows:

#### 222.3 Definitions.

These definitions apply only to § 222.22:

*Adequately covered* means, with respect to species listed pursuant to section 4 of the ESA, that a proposed conservation plan has satisfied the permit issuance criteria under section 10(a)(2)(B) of the ESA for the species covered by the plan and, with respect to unlisted species, that a proposed conservation plan has satisfied the permit issuance criteria under section 10(a)(2)(B) of the ESA that would otherwise apply if the unlisted species

covered by the plan were actually listed. For the Services to cover a species under a conservation plan, it must be listed on the section 10(a)(1)(B) permit.

*Changed circumstances* means changes in circumstances affecting a species or geographic area covered by a conservation plan that can reasonably be anticipated by plan developers and NMFS and that can be planned for (e.g., the listing of new species, or a fire or other natural catastrophic event in areas prone to such events).

*Conserved habitat areas* means areas explicitly designated for habitat restoration, acquisition, protection, or other conservation purposes under a conservation plan.

*Conservation plan* means the plan required by section 10(a)(2)(A) of the ESA that an applicant must submit when applying for an incidental take permit. Conservation plans also are known as "habitat conservation plans" or "HCPs."

*Operating conservation program* means those conservation management activities which are expressly agreed upon and described in a conservation plan or its Implementing Agreement, if any, and which are to be undertaken for the affected species when implementing an approved conservation plan, including measures to respond to changed circumstances.

*Properly implemented conservation plan* means any conservation plan, Implementing Agreement and permit whose commitments and provisions have been or are being fully implemented by the permittee.

*Unforeseen circumstances* means changes in circumstances affecting a species or geographic area covered by a conservation plan that could not reasonably have been anticipated by plan developers and NMFS at the time of the conservation plan's negotiation and development, and that result in a substantial and adverse change in the status of the covered species.

#### § 222.22 [Amended]

7. In § 222.22, paragraphs (g) and (h) are added.

\* \* \* \* \*

(g) *Assurances provided to permittee in case of changed or unforeseen circumstances.* The assurances in this paragraph (g) apply only to incidental take permits issued in accordance with paragraph (c) of this section where the conservation plan is being properly implemented, and apply only with respect to species adequately covered by the conservation plan. These assurances cannot be provided to Federal agencies. This rule does not apply to incidental take permits issued prior to March 25,

1998. The assurances provided in incidental take permits issued prior to March 25, 1998 remain in effect, and those permits will not be revised as a result of this rulemaking.

(1) *Changed circumstances provided for in the plan.* If additional conservation and mitigation measures are deemed necessary to respond to changed circumstances and were provided for in the plan's operating conservation program, the permittee will implement the measures specified in the plan.

(2) *Changed circumstances not provided for in the plan.* If additional conservation and mitigation measures are deemed necessary to respond to changed circumstances and such measures were not provided for in the plan's operating conservation program, NMFS will not require any conservation and mitigation measures in addition to those provided for in the plan without the consent of the permittee, provided the plan is being properly implemented.

(3) *Unforeseen circumstances.* (i) In negotiating unforeseen circumstances, NMFS will not require the commitment of additional land, water, or financial compensation or additional restrictions on the use of land, water, or other natural resources beyond the level otherwise agreed upon for the species covered by the conservation plan without the consent of the permittee.

(ii) If additional conservation and mitigation measures are deemed necessary to respond to unforeseen circumstances, NMFS may require additional measures of the permittee where the conservation plan is being properly implemented, but only if such measures are limited to modifications within conserved habitat areas, if any, or to the conservation plan's operating conservation program for the affected species, and maintain the original terms of the conservation plan to the maximum extent possible. Additional conservation and mitigation measures will not involve the commitment of additional land, water or financial compensation or additional restrictions on the use of land, water, or other natural resources otherwise available for development or use under the original terms of the conservation plan without the consent of the permittee.

(iii) NMFS will have the burden of demonstrating that unforeseen circumstances exist, using the best scientific and commercial data available. These findings must be clearly documented and based upon reliable technical information regarding the status and habitat requirements of the affected species. NMFS will

consider, but not be limited to, the following factors:

(A) Size of the current range of the affected species;

(B) Percentage of range adversely affected by the conservation plan;

(C) Percentage of range conserved by the conservation plan;

(D) Ecological significance of that portion of the range affected by the conservation plan;

(E) Level of knowledge about the affected species and the degree of specificity of the species' conservation

program under the conservation plan; and

(F) Whether failure to adopt additional conservation measures would appreciably reduce the likelihood of survival and recovery of the affected species in the wild.

(h) Nothing in this rule will be construed to limit or constrain the Assistant Administrator, any Federal, State, local, or tribal government agency, or a private entity, from taking additional actions at its own expense to

protect or conserve a species included in a conservation plan.

Dated: February 13, 1998.

**Rolland A. Schmitten,**

*Assistant Administrator for Fisheries,  
National Marine Fisheries Service.*

Dated: February 11, 1998.

**Donald J. Barry,**

*Acting Assistant Secretary, Fish, Wildlife, and  
Parks, Department of Interior.*
