

In addition to requesting comments on this policy statement, the FAA requests comments on the means of determining the appropriate classification, when necessary, for new or derivative airplane types. The FAA expects that advisory material will be necessary to provide specific guidance for evaluating wake vortex characteristics. Until new methods are developed and validated, the FAA intends to use the test methods and procedures previously used to develop the current weight classification scheme, illustrated in Figure 1, for transport category airplanes of conventional design. An example of these test methods and procedures can be found in FAA Report No. FAA-AEQ-75-1, "Investigation of the Vortex Wake Characteristics of Jet Transports During Climbout and Turning Flight," May 1975 (available through the National Technical Information System, Springfield, Virginia 22151).

Issued in Renton, Washington, on February 18, 1998.
