Data Collection: Meteorologists' and Public's Views and Comments on Weather and Climate Issues

The National Science Foundation, an independent federal agency, is interested in obtaining the public's views and attitudes toward weather and climate issues.

Specifically, we're seeking input and comments from all interested persons on their views of the value of weather reporting and climate research in their lives, and their familiarity with weather and climate-related issues that have an effect on them now or will in the future.

In addition to the general public, we are especially interested in receiving comments from informed professionals and followers of science and engineering research and education.

In an effort to obtain the public's input and useful information, the National Science Foundation has developed the questions that follow. Responses from the public will be used only in the aggregate, and only to help the NSF in its efforts to better explain itself and its activities to the American public.
