

new model for use in merger analysis, how should it be tested to ensure that the design criteria have been met?

How should a model and associated databases be maintained and updated? What process should be followed to identify needed modifications to the model and create new versions of the computer code? Should a fixed set of data inputs be identified, in order to avoid this potential difficulty and provide consistent a starting point for analysis (assuming applicants can file additional data for further analyses if they choose)? As an alternative, should applicants be permitted to substitute the most recent data from the same sources even if these data have not previously tested in the model? Or should a standard set of model inputs be maintained and updated as a group? If a standard set of inputs is maintained, should Commission staff be directly responsible for the maintenance of these data or can this responsibility be carried out by third parties?
