SUPPLEMENTARY INFORMATION:

I. Abstract

The 1997 Distribution of Sales by Class of Customer is part of, and supplemental to, the 1997 Census of Manufactures. The report is done on a 10 year cycle for years ending in "7." The data tabulated from this survey are used by the Government, the academic community, and the private sector. The Bureau of Economic Analysis (BEA) is the principal Government user. The BEA uses the data as input to its National Income and Product Accounts.

Respondents, chosen from the 1997 Census of Manufactures, will receive report forms with their total product shipments data imprinted on the forms based on data they reported in the census. Multi-unit establishments are asked what portion of their shipments were to other establishments of their company and what portion of their shipments were to establishments not of their company. They are further asked to break out these data for the portions going to wholesale, retail, manufacturing, government, and other. The single-unit form is similar, except respondents are not asked about other establishments of their company.

II. Method of Collection

Data are collected using two survey forms, one for single-unit establishments the other for multi-unit establishments. The panel is chosen from all mailed establishments in the 1997 Census of Manufactures using probability proportionate to size. The panel is also stratified by single-unit/multi-unit by 6-digit North American Industry Classification (NAICS) industry to assure that all NAICS industries are properly represented.
