requirements of § 194.22. After EPA reviews these documents for adequacy, EPA will conduct an inspection of a DOE audit of the site to determine whether the requirements set out in these documents are being adequately implemented in accordance with Conditions 2 and 3 of EPA’s WIPP certification decision (Criteria for the Certification and Recertification of the Waste Isolation Pilot Plant’s Compliance With the 40 CFR Part 191 Disposal Regulations: Certification Decision). Section 194.8 of the WIPP Compliance Criteria (as amended by the final certification decision) provides the public at least 30 days to comment on the documents placed in EPA’s docket relevant to the site approval process.

If EPA determines that the provisions in the documents are adequately implemented, EPA will notify DOE by letter and place the letter in the official Air Docket in Washington DC, and in the informational docket locations in New Mexico. A positive approval letter will allow DOE to begin shipping TRU waste from RFETS. EPA will not make a determination of compliance before the inspection or before the 30-day comment period has closed.

Information on EPA’s radioactive waste disposal standards (40 CFR Part 191), the compliance criteria (40 CFR Part 194), and EPA’s certification decision is filed in the official EPA Air Docket, Dockets No. R–89–01, A–92–56, and A–93–02, respectively, and is available for review in Washington DC, and at the three EPA WIPP informational docket locations in New Mexico. The docket in New Mexico contain only major items from the official Air Docket in Washington DC, plus those documents added to the official Air Docket since the October 1992 enactment of the WIPP LWA.

Richard D. Wilson,
Acting Assistant Administrator for Air and Radiation.

SUPPLEMENTARY INFORMATION: You may submit comments and data by sending electronic mail (E-mail) to: MWKASZYN@OPM.Gov.

On February 20, 1998, the President signed an Executive Memorandum directing the Office of Personnel Management (OPM) to take the necessary steps to bring the FEHB Program into contractual compliance with the Consumer (Patient) Bill of Rights and Responsibilities by no later than year end 1999. The Memorandum specifically directed OPM to propose regulations within 90 days to prohibit practices that restrict physician-patient communications about medically necessary treatment options. This action will prohibit FEHB participating carriers...
from placing incentives in contracts with health care providers or health care workers that would limit providers’ or health care workers' ability to discuss medically necessary treatment options with Federal enrollees. We are aware that a proposal to enact a “gag clause” regulation raises three broad areas of concern regarding: (1) potential impairment of a health plan’s ability to review utilization against appropriate treatment protocols, (2) potential conflict with providers’ (including carriers’) ethical or moral beliefs, and (3) impact on providers’ or workers’ ability to discuss non-covered or high cost treatment options. This regulation is not intended to limit a health plan’s ability to perform utilization review nor is it intended to cause providers or health care workers to discuss treatment options that they would not ordinarily discuss in their normal course of practice because such options are against their professional judgement and/or ethical, moral or religious beliefs. The regulation will ensure that providers or health care workers have the ability to communicate fully and openly with patients regarding the ability to communicate fully and/or ethical, moral or religious beliefs. The regulation will ensure that providers or health care workers have the ability to communicate fully and openly with patients regarding medically necessary treatment options regardless of cost or whether the benefits are covered by their health plan. Simply stated, the amended regulation is intended to remove any contractual impediment to a candid and open physician-patient relationship.

Regulatory Flexibility Act

I certify that this regulation will not have a significant economic impact on a substantial number of small entities because the regulation will only affect health insurance carriers under the Federal Employees Health Benefits Program.

Executive Order 12866, Regulatory Review

This rule has been reviewed by the Office of Management and Budget in accordance with Executive Order 12866.

List of Subjects in 48 CFR Part 1609

Administrative practice and procedure, Government employees, Health facilities, Health insurance, Health professionals, Hostages, Iraq, Kuwait, Lebanon, Reporting and record keeping requirements, Retirement.

Office of Personnel Management.

Janice R. Lachance,
Director.

For the reasons set forth in the preamble OPM proposes to amend 48 CFR Part 1609 as follows:

Subpart 1609.70—Minimum Standards for Health Benefit Carriers

1. The authority citation for 48 CFR Part 1609 continues to read as follows:

2. In §1609.7001 new paragraph (c)(7) is added to read as follows:

§1609.7001 Minimum Standards for Health Benefit Carriers

* * * * *

(c) * * *

(7) Entering into contracts with providers or health care workers that include incentive plans that directly or indirectly create an inducement to limit communication of, or reduce, medically necessary services to any individual covered under the FEHB Program.

[Docket No. RSPA–97–2095; Notice 1]

RIN 2137–AC11

Pipeline Safety: Adoption of Industry Standards for Breakout Tanks

AGENCY: Research and Special Programs Administration (RSPA),DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This proposed rule would incorporate industry consensus standards for aboveground storage tanks into the regulations for the transportation of hazardous liquids by pipelines. This action would upgrade the pipeline safety regulations for breakout tanks to the level of the industry standards currently applicable to other steel petroleum tanks at tank farms and refineries throughout the United States. The proposed incorporation of these industry published standards would ensure the safety of breakout tanks used in the transportation of petroleum, petroleum products or anhydrous ammonia.

DATES: RSPA invites interested persons to submit comments by July 20, 1998. Late filed comments will be considered as far as practicable.

ADDRESSES: All commenters should identify the docket number as RSPA–97–2095 and the subject heading as “Pipeline Safety: Adoption of Industry Standards for Breakout Tanks.” Written comments should be mailed or delivered to the Docket Facility, U.S. Department of Transportation, Room #PL–401, 400 Seventh Street, SW, Washington, DC 20590–0001. The original and two copies of the comments should be submitted. Persons mailing comments and desiring confirmation of their receipt must include a self–addressed stamped postcard. The Dockets Facility is open from 10:00 a.m. to 5:00 p.m., Monday through Friday, except on Federal holidays when the facility is closed. Comments may also be submitted electronically via e-mail to ops.comments@spa.dot.gov. Files should be sent in ASCII or text format.

FOR FURTHER INFORMATION CONTACT:
Albert C. Garnett, Office of Pipeline Safety (OPS), telephone: (202) 366–2036, FAX: (202) 366–4566, e-mail: albert.garnett@spa.dot.gov regarding the subject matter of this notice; or the Docket Facility, telephone (800) 647–5527 regarding copies of this notice or other material in the docket.

Comments that have been scanned into the docket may be accessed electronically and read at http://dms.dot.gov. General information about the RSPA/Office of Pipeline Safety programs can be obtained by accessing OPS’s internet homepage at http://ops.dot.gov.

SUPPLEMENTARY INFORMATION:

Background

The definition and regulation of Breakout Tanks

In 49 CFR §195.2 a breakout tank is defined as a tank used to: (a) relieve surges in a hazardous liquid pipeline system; or (b) receive and store hazardous liquid transported by a pipeline for reinjection and continued transportation by pipeline. Hazardous liquids are defined in 195.2 as: petroleum, petroleum products, or anhydrous ammonia.

Breakout tanks are designed, constructed, operated, and maintained to the same industry standards as other storage tanks throughout the petroleum industry. Consequently, breakout tanks are indistinguishable from other storage tanks that may be located at the same pipeline terminal. They are simply tanks that the operator has assigned to breakout tank functions. These steel storage tanks are constructed in various configurations, sizes, and material properties to safely contain the liquids and their volatility at the design temperature(s) and pressure(s). Most breakout tanks are aboveground vertical cylindrical tanks that are classified as either atmospheric storage tanks.
