

It is reasonable to expect that DOE will provide a portion of the cost for the military children's education. The precise dollar amount of the impacts cannot be calculated until the students are actually enrolled in the schools and the school district files an official application to DOE for receipt of impact aid funds.

#### *Public Health and Safety*

One commentor expressed concern that during Santa Ana wind conditions, the accident potential over the cities of Oxnard, Camarillo, and Port Hueneme would increase. The Air Installation Compatibility Use Zone Program included Santa Ana conditions in the calculations for the Accident Potential Zones ("APZs") shown in the FEIS. The APZs identified for Runway 03/21 mainly encompass agricultural land with the exception of the Naval Air Mobile Home Park.

#### *Hazardous Material and Wastes*

One commentor expressed concerns regarding the proportional increased risk of fuel spills from E-2 aircraft fuel handling. Spill prevention is an inherent part of NAWS Point Mugu fueling operations. All personnel who handle hazardous materials and wastes participate in a quarterly training update and are provided specific spill response guidance for their work areas.

#### **Conclusions**

In deciding where to realign E-2 aircraft from MCAS Miramar, I considered the following: the 1995 BRAC Commission recommendations; E-2 operational requirements; costs associated with construction of facilities, operation and maintenance of aircraft, and training of personnel; environmental impacts; and the comments received during the DEIS and FEIS review periods.

After carefully weighing all of these factors, I have decided, on behalf of the Department of the Navy, to direct realignment of four Pacific Fleet E-2 squadrons to NAWS Point Mugu. Environmental impacts are slightly more than the NAS Lemoore and NAF El Centro alternatives; however, the NAWS Point Mugu alternative is operationally preferred because of close proximity to operating areas, is the least expensive alternative and it fully uses excess capacity at NAWS Point Mugu.

Implementation of the Naws Point Mugu alternative will result in significant but manageable impacts to air quality and schools. Potentially significant adverse impacts to cultural resources will be mitigated to less than significant levels. The DON will

implement the mitigation measures identified in this Record of Decision.

Dated: June 2, 1998.
