SUPPLEMENTARY INFORMATION:

I. Abstract

The Census Bureau plans to resubmit the Survey of Plant Capacity. Data are gathered from a sample of manufacturing plants in the United States. The survey forms collect data on the value of plant production during actual operations and at full production capability.

This resubmission is to address proposed changes to the MQ-C1 form. We plan to expand one item to collect plant operations data by shift. We also plan to collect the number of temporary production workers and hours worked by temporary production workers in addition to the total number of production workers and hours worked.

In the 1997 survey, the reference period covers the fourth quarter of the survey year only rather than the fourth quarter of the survey year and the prior year. This change decreased the respondent burden from 2 hours to 1.25 hour per respondent. Based on discussions with potential respondents, we estimate that the new data will require about 1.5 hours to complete. Therefore we estimate the total respondent burden to complete the revised form to be 2.75 hours.

The survey data are used in measuring inflationary pressures and capital flows, in understanding productivity determinants, and in analyzing and forecasting economic and industrial trends. The survey results are used by such agencies as the Federal Reserve Board, Federal Emergency Management Agency, International Trade Administration, and the Department of Defense.

II. Method of Collection

The Census Bureau mails out survey forms to collect the data. Companies are asked to respond to the survey within 30 days of the initial mailing. Letters encouraging participation are mailed to companies that have not responded by the designated time.
