The SSC will also review reports of the Ad Hoc Crustacean and Finfish Stock Assessment Panels (SAP) that include alternatives for the overfishing criteria, as required by the SFA, and proxies for expressing maximum sustainable yield (MSY) and optimum yield (OY) in terms of spawning potential ratio (SPR), spawning stock biomass per recruit (SSBR), or other credible analyses as appropriate for the stocks or stock complexes of each FMP: shrimp, stone crab, and spiny lobster (Crustacean SAP Report) and for coastal migratory pelagics, reef fish, and red drum (Finfish SAP Report). Alternatives for rebuilding periods for stocks that have been classified as overfished by NMFS and modifications to the framework procedures for specifying acceptable biological catch (ABC) and total allowable catch (TAC) will be considered, where appropriate.

Although other issues not on the agenda may come before the SSC for discussion, in accordance with the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be the subject of formal action during this meeting.
