SUPPLEMENTARY INFORMATION: The proposed activity would directly support the ongoing environmental remediation program at the Mound Plant. Construction of the accessway to the consolidated waste processing facility would enable the facility to accomplish volume-reduction, metal recovery, and waste packaging goals established for the site. Construction of the accessway would impact approximately 0.06 acres of a man-made, isolated wetland. The wetland is one of several delineated in the OU9 Hydrogeologic Investigation: Wetlands Determination Report, January 1994. The proposed action would result in long-term and direct impacts from the filling of an isolated, man-made wetland of 0.06 acres in size. The affected wetland would be backfilled with gravel during the construction of an accessway which is needed to support a consolidated waste processing facility. Best management practices would be utilized to avoid or minimize potential harm to or within the surrounding environment.

Columbia requests certification to provide this service at an existing point of delivery which was originally authorized under Section 311 of the Natural Gas Policy Act (NGPA) for transportation service. Columbia states that the customer is CMD, the maximum daily quantity is 40 Dth and the estimated annual quantity is 14,600 Dth.
