

for ensuring that workers are properly and effectively using the equipment. Records of fit-testing and essential for determining that the worker is wearing the proper respirator.

Title 30 CFR Sections 56.5005 and 57.5005 require metal and nonmetal mine operators to institute a respirator program governing selection, maintenance, training, fitting, supervision, cleaning and use of respirators. To control those occupational diseases caused by breathing air contaminated with harmful dusts, fumes, mists, gases, or vapors, the primary objective is to prevent atmospheric contamination. MSHA's current policy, as prescribed by regulation, is to require that this be accomplished by feasible engineering and administrative control measures. When effective controls are not feasible, or while they are being instituted, or during occasional entry into hazardous atmospheres to perform maintenance or

investigations, appropriate respirators are to be used in accordance with established procedures protecting the miners.

Sections 56.5005 and 57.5005 incorporate by reference requirements of the American National Standards Institute (ANSI Z88.2-1969). These incorporated requirements mandate that miners who must wear respirators be fit-tested to the respirators that they will use. Certain records are also required to be kept in connection with respirators, including records of the date of issuance of the respirator, and fit-test results. The fit-testing records are essential for determining that the worker is wearing the proper respirator.

II. Current Actions

The mine operator uses the information to properly issue respiratory protection to miners when feasible engineering and/or administrative controls do not reduce the exposure to permissible levels. Fit-

testing records are used to ensure that a respirator worn by an individual is in fact the one for which that individual received a tight fit. MSHA uses the information to determine compliance with the standard.
