

did not specify dates for state compliance with the Section 303(d) requirements, but reiterated the statutory provisions calling for submissions from time to time. On July 24, 1992, EPA published a final rule (57 FR 33040) that amended 40 CFR 130.7 to establish that, for the purposes of identifying water quality limited waters still requiring TMDLs, "from time to time" means once every two years. The list of waters still needing TMDLs must also include a priority ranking and must identify the waters targeted for TMDL development during the next two years (40 CFR 130.7).

Consistent with EPA's revised regulations, California submitted to EPA for its approval its listing decisions under Section 303(d)(2) on June 25, 1998. EPA approved California's listing of 472 waters and associated priority rankings. EPA disapproved California's decisions not to list 37 water quality limited segments and associated pollutants, and an additional 12 pollutants for waterbodies already listed by the State. EPA identified these additional waters and pollutants for inclusion on the 1998 Section 303(d) list. EPA also announced its intention to approve the State's listing of Coyote Creek for toxicity pending solicitation of public comments concerning the State's listing decision.

EPA solicits public comment on its identification of 37 additional waters and associated pollutants, and 12 additional pollutants for waters already listed by the State, for inclusion on California's 1998 Section 303(d) list. EPA also solicits public comment on California's listing of Coyote Creek in the Los Angeles Region due to toxicity.

EPA notes that it does not normally solicit public comment on its decisions to approve individual waters included on state Section 303(d) lists. Pursuant to the public participation requirements of 40 CFR part 25, EPA is providing this opportunity for public review and comment on its proposed approval decisions because California provided inadequate opportunity for public comment on the decision to list Coyote Creek for toxicity. In the future, EPA expects that states will provide adequate opportunities for public comment on all listed waters during development of the state lists.
