NUCLEAR REGULATORY COMMISSION

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: U.S. Nuclear Regulatory Commission (NRC).

ACTION: Notice of pending NRC action to submit an information collection request to OMB and solicitation of public comment.

SUMMARY: The NRC is preparing a submittal to OMB for review of continued approval of information collections under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

INFORMATION PERTAINING TO THE REQUIREMENT TO BE SUBMITTED:

1. *The title of the information collection:* 10 CFR Part 20 Standards for Protection Against Radiation.

2. *Current OMB Approval Number:* 3150-0014.

3. *How often the collection is required:* Annually for most reports; at license termination for reports dealing with decommissioning.

4. *Who is required or asked to report:* NRC licensees, including those requesting license termination.

5. *The number of annual responses:* The total annual number of NRC licensees responding to this requirement by either reporting or recordkeeping is 5939.

6. *The number of hours needed annually to complete the requirement or request:* 165,498 (approximately 28 hours per licensee).

7. *Abstract:* 10 CFR Part 20 establishes standards for protection against ionizing radiation resulting from activities conducted under licenses issued by the NRC. These standards require the establishment of radiation protection programs, maintenance of radiation records, recording of radiation received by workers, reporting of incidents which could cause exposure to radiation, submittal of an annual report to NRC of the results of individual monitoring, and submittal of license termination information. These mandatory requirements are needed to protect occupationally exposed individuals from undue risks of excessive exposure to ionizing radiation and to protect the health and safety of the public.

Submit, by February 16, 1999, comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?
