

Results of the evaluation will be presented to HCFA and to Congress, who will use the results to determine whether the demonstration should be extended to other sites.

The research questions to be addressed by the surveys focus on access, quality, and product selection. Our collection process will include fielding a survey for oxygen users and a survey for non-oxygen users before the demonstration begins and again once the new demonstration prices have been put into effect. The same data collection process will be followed in the comparison site (Brevard County). In the analysis of the data, we will also control for socioeconomic factors. This will allow us to separate the effects of the demonstration from beneficiary-or site-specific effects.

In the survey, we will also ask beneficiaries about the types of equipment that they use. This will allow us to determine if certain users are affected while others are not. For example, we will be able to evaluate whether oxygen users experience a greater increase or decrease in access and quality than beneficiaries who receive enteral nutrition.

The information that this survey will provide about access, quality, and product selection will be very important to the future of competitive bidding within the Medicare program. This is the first Medicare demonstration that allows competitive bidding for services and equipment provided to beneficiaries. A negative impact on access, quality, or product selection would have significant implications for the future of competitive bidding within the Medicare program.

Frequency: Two times for each affected beneficiary.

Affected Public: Individuals or Households.

Number of Respondents: 2,560.

Total Annual Responses: 2,560.

Total Annual Hours: 724.4.
