SUPPLEMENTARY INFORMATION:**I. Abstract**

The Census Bureau has conducted the Annual Survey of Manufactures (ASM) since 1949 to provide key measures of manufacturing activity during intercensal periods. In census years ending in "2" AND "7", we mail and collect the ASM as part of the census of manufactures. This survey is an integral part of the Government's statistical program. The ASM furnishes up-to-date estimates of employment and payrolls, hours and wages of production workers, value added by manufacture, cost of materials, value of shipments by product class, inventories, and expenditures for both plant and equipment and structures. The survey provides data for most of these items for each of the 474 industries as defined in the North American Industry Classification System (NAICS). It also provides geographic data by state at a more aggregated industry level.

The survey also provides valuable information to private companies, research organizations, and trade associations. Industry makes extensive use of the annual figures on product class shipments at the U.S. level in its market analysis, product planning, and investment planning. The ASM data are used to benchmark and reconcile monthly and quarterly data on manufacturing production and inventories.

This ASM clearance request will be for the years—1999 to 2001. There will be no changes to the information requested from respondents.

II. Method of Collection

The ASM statistics are based on a survey which includes two components, mail and nonmail. The mail portion of

the survey is a probability sample of about 55,000 manufacturing establishments selected from a total of about 225,000 establishments. These 225,000 establishments represent all manufacturing establishments of multiunit companies (companies that operate at more than one physical location) and all single-establishment manufacturing companies that were mailed forms in the 1997 Census of Manufactures.

The nonmail portion of the survey is defined as all single-establishment manufacturing companies that we tabulated as administrative records in the 1997 Census of Manufactures.

Although this portion includes approximately 155,000 establishments, it accounted for less than 2 percent of the estimate for total value of shipments at the total manufacturing level for 1997. This administrative information, which includes payroll, total employment, industry classification, and physical location, is obtained under conditions which safeguard the confidentiality of both tax and census records.
