DEPARTMENT OF DEFENSE

Department of the Army Corps of Engineers

Intent to Prepare an Integrated Feasibility Report/Environmental Impact Statement for Environmental Restoration and Flood Control in the Sand Creek Watershed near Wahoo, Nebraska

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: Congress authorized the U.S. Army Corps of Engineers (COE) to conduct a reconnaissance study along the Lower Platte River and Tributaries, Nebraska in the interest of flood control, environmental restoration, and other purposes. The COE has conducted a reconnaissance study pursuant to this authority, and has determined that further study in the Sand Creek Watershed in the nature of a Feasibility-Phase Study is required to fulfill the intent of the study authority and to assess the extent of the Federal interest. The goal of the integrated Feasibility Study/EIS will be to determine the alternative that provides a desired combination of environmental restoration, reduction of sedimentation and water quality improvement, while also providing flood damage reduction and recreation benefits.

Alternatives proposed for consideration are (1) a 637-surface acre multipurpose impoundment one mile north of Wahoo, Nebraska on Sand Creek locally known as the Lake Wanahoo proposal, (2) seven smaller impoundments upstream from the Lake Wanahoo site proposed by the Natural Resources Conservation Service (NRCS) in 1998, (3) two smaller impoundments upstream that were proposed by the COE back in 1960, (4) a combination of Lake Wanahoo and one of the old COE damsites, (5) a combination of Lake Wanahoo and the seven smaller upstream impoundments, and (6) one or more stream channel grade control structures starting at the Lake Wanahoo location and sized to provide wetlands without creating a structure needing a dam classification. The no COE action alternative will also be considered.
