

endangered species program. To help guide recovery efforts, the Service is working to prepare recovery plans for most of the listed species native to the United States. Recovery plans describe actions considered necessary for the conservation of the species, establish criteria for downlisting or delisting listed species, and estimate time and cost for implementing the recovery measures needed. The Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) (Act), requires the development of recovery plans for listed species unless such a plan would not promote the conservation of a particular species. Section 4(f) of the Act as amended in 1988 requires that public notice and an opportunity for public review and comment be provided during recovery plan development. The Service will consider all information presented during the public comment period prior to approval of each new or revised recovery plan. Substantive technical comments will result in changes to the plan. Substantive comments regarding recovery plan implementation may not necessarily result in changes to the recovery plan, but will be forwarded to appropriate Federal or other entities so that they can take these comments into account during the course of implementing recovery actions. Individualized responses to comments will not be provided. The six species of plants covered in the draft recovery plan are primarily restricted to gabbro soils habitat in the central Sierra Nevada foothills of California. Conversion of habitat to urban uses has extirpated the listed species and species of concern from a significant portion of their historic ranges. The remaining natural communities are highly fragmented, and many are marginal habitats in which these species may not persist during catastrophic events. The objectives of this recovery plan are two-fold: (1) to delist the plants Stebbin's morning-glory, Pine Hill ceanothus, Pine Hill flannelbush, El Dorado bedstraw, and Layne's butterweed by protecting, enhancing, restoring, and appropriately managing their habitat; and (2) to ensure the long-term conservation of the one species of concern, El Dorado mule-ears, that occurs in the same gabbro soils habitats with the listed species.

#### Public Comments Solicited

The Service solicits written comments on the draft recovery plan described. All comments received by the date specified above will be considered prior to approval of this plan.
