[Docket No. 99-034-1]

Availability of an Environmental Assessment and Finding of No Significant Impact for Field Testing Marek's Disease—Newcastle Disease Vaccine, Serotypes 1 and 3, Live Marek's Disease Virus Vector

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice.

SUMMARY: We are advising the public that the Animal and Plant Health Inspection Service has prepared an environmental assessment and finding of no significant impact concerning authorization to ship for the purpose of field testing, and then to field test, an unlicensed live viral vaccine to protect poultry from Marek's disease and Newcastle disease. A risk analysis, which forms the basis for the environmental assessment, has led us to conclude that field testing this veterinary vaccine will not have a significant impact on the quality of the human environment. Based on our finding of no significant impact, we have determined that an environmental impact statement need not be prepared. We intend to authorize shipment of this vaccine for field testing 14 days after the date of this notice, unless new substantial issues bearing on the effects of this action are brought to our attention. We also intend to issue a veterinary biological product license for this vaccine, provided the field test data support the conclusions of the environmental assessment and finding of no significant impact and the product meets all other requirements for licensure.

ADDRESSES: Copies of the environmental assessment and finding of no significant impact may be obtained by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**. Please refer to the docket number, date, and complete title of this notice when requesting copies. Copies of the environmental assessment and finding of no significant impact (as well as the risk analysis with confidential business information removed) are available for public inspection at USDA, room 1141, South
