SUPPLEMENTARY INFORMATION:

I. Abstract

The Census Bureau must provide everyone in the United States and Outlying Areas the opportunity to be counted in Census 2000 as well as making sure that persons are counted in the appropriate places. The Census 2000 Special Place Facility Questionnaire (FQ) is a Computer Assisted Telephone Interview (CATI) operation in which updated information on group quarters (GQs) and housing units is collected and GQ codes are assigned; cases that cannot be resolved by CATI are sent to the field for personal visit (PV) interviews. The GQ code is a critical component to correctly tabulate the data for different types of GQs. This operation began in October 1998 and will conclude in July 1999.

To evaluate this operation, the Census Bureau is proposing to conduct a follow-up operation to the Census 2000 Special Place Facility Questionnaire. The types of information collected during the interviews will concern the types of services the facility provides, the number of persons that reside within the facility, and what types of GQs are associated with the facility. All information collected will be pertinent

to verifying the accuracy of the GQ code.

A personal visit reinterview of 1,000 cases that were initially CATI or PV will be conducted. These 1,000 cases will consist of two strata, large and complex special places with a sample size of 750, (i.e. universities, hospitals) and others with a sample size of 250, (i.e. nursing homes). We will use these data to determine: (1) How well the facility questionnaire performed by assessing the frequency with which the group quarters classification code was different between the production interview and reinterview, (2) whether or not there was a significant difference in the occurrence of group quarters classification code change by special place type, and (3) whether or not CATI versus PV increased data quality by computing item nonresponse rates. The evaluation interviews will be conducted in six regions during January 2000.

II. Method of Collection

The reinterview will be conducted via personal visits administered by specially trained interviewers using a paper questionnaire that has been modified from the production questionnaire. The design of the reinterview questionnaire is based on the results of cognitive tests and research conducted prior to the Census 2000 Dress Rehearsal.
