

minimize the consequences of accidents involving highly hazardous chemicals.

II. Proposed Actions

OSHA proposes to reduce its earlier estimates of the burden hours for the HAZWOPER Standard from 2,229,062 to 1,592,338 hours. The burden reduction resulted when the Agency reestimated the number of clean-up sites, as well as the number of storage, treatment, and disposal (STD) sites (also referred to as Resource Conservation and Recovery Act [RCRA] sites) from 725 to 1,115. OSHA determined that the number of emergency response units remained the same as originally estimated. The Agency also changed the methodology for the training requirements and medical surveillance provisions, using the number of employees rather than sites to better estimate the burden hours for these provisions.

In addition, OSHA identified several activities as usual and customary business practices. Under PRA-95, the burden associated with usual and customary activities are not calculated as part of the paperwork burden.

OSHA will summarize the comments submitted in response to this notice and will include this summary in the request to OMB to extend the approval of the information collection requirements contained in the HAZWOPER standard.
