

- The nature of resources to be contributed to the collaboration
- Key staff expertise, qualifications and relevant experience
- Willingness to assign technical staff to on-site collaborative efforts
- Ability to effectively commercialize new discoveries

The roles of the Craniofacial Developmental Biology and Regeneration Branch for the proposed CRADA are as follows:

1. Provide project coordination for the overall development and testing.
2. Further develop and refine animal models to study bone metastasis and the role of osteonectin for testing of the therapeutics.

3. Provide further characterization of the cellular receptor for osteonectin.

4. Provide in-vitro testing of biological activity of possible therapeutics with various cell lines.

5. Provide in-vitro testing of receptor-based diagnostics.

6. Jointly publish research results. The roles of the Collaborator under the proposed CRADA are as follows:

1. Provide project coordination for the overdevelopment and testing.

2. Develop and provide antibodies or other tools for diagnostic purposes based on the cellular receptor. This may also include peptide mimetics or other reagents based on the binding site on osteonectin for its cellular receptor.

3. Determine if the level of osteonectin in serum is a possible diagnostic tool and develop an easy and reliable assay for osteonectin.

4. Develop therapeutics for cancer metastasis based either on matrix metalloprotease activity, receptor antagonists or other acceptable treatments for patients.

5. Jointly publish research results.

Dated: June 25, 1999.
