

2000. They expect that drilling 497 wells will allow them to adequately extract the natural gas. There are 170 wells located within the Jonah Field, which are served by three transportation pipelines. This field development project will not require any additional transportation pipelines. The potential development would include a separator, dehydrator, production tanks, and tin horns (for holding produced water) at each surface well location; an access road and a 3 to 4 inch gas gathering pipeline to each surface well location; water supply wells; and produced water disposal systems (either injection wells or surface pits).

The companies will be allowed to continue to drill wells at 80 acre spacing as approved by the ROD for the Jonah II EIS while the EA is being prepared.
