## DEPARTMENT OF THE TREASURY

### Office of Thrift Supervision

[AC-11: OTS Nos. 0210 and H-3537]

#### **Mutual Federal Savings Bank, Muncie, IN; Approval of Conversion Application**

Notice is hereby given that on November 10, 1999, the Director, Office of Examination & Supervision, Office of Thrift Supervision, or his designee, acting pursuant to delegated authority, approved the application of Mutual Federal Savings Bank, Muncie, Indiana, to convert to the stock form of organization. Copies of the application are available for inspection at the Dissemination Branch, Office of Thrift Supervision, 1700 G Street, NW, Washington, DC 20552, and the Central Regional Office, Office of Thrift Supervision, 200 West Madison Street, Suite 1300, Chicago, Illinois 60606.

Dated: November 16, 1999.

By the Office of Thrift Supervision.

**Nadine Y. Washington,**

*Corporate Secretary.*

## UTAH RECLAMATION MITIGATION AND CONSERVATION COMMISSION

### **Notice of Finding of No Significant Impact for the Strawberry Aqueduct and Collection System Angler-Access Acquisition and Corridor Management**

**AGENCY:** The Utah Reclamation Mitigation and Conservation Commission.

**ACTION:** Notice of Finding of No Significant Impact (FONSI).

**SUMMARY:** On November 17, 1999, Michael C. Weland, Executive Director of the Utah Reclamation Mitigation and Conservation Commission (Mitigation Commission), signed the Finding of No Significant Impact (FONSI), which documents the decision to fund and complete the Angler-Access Acquisition and Corridor Management project. The project is located in Duchesne County and Wasatch County, Utah. The Mitigation Commission and Bureau of Reclamation, joint-lead agencies for the project, documented the environmental effects of funding and completing this project in a 1999 environmental assessment (EA). The Draft EA was issued on July 31, 1998, analyzing the environmental impacts of completing the remaining angler-access and terrestrial wildlife mitigation acquisitions and establishing long-term management guidelines for mitigation lands. The Final EA was refined based upon public comment and released in November 1999. The Mitigation Commission has reviewed the Final EA, determined it adequate for the decisions to be made, and issued a FONSI, in accordance with the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*).

Acquisition and management of angler access corridors are required by the 1988 Supplement to the Definite Plan Report (DPR) for the Bonneville Unit, Central Utah Project (CUP), and/or authorized by the Central Utah Project Completion Act of 1992 (Titles II through VI of Pub. L. 102-575). The Strawberry Aqueduct and Collection System (SACS), a component of the Bonneville Unit, Central Utah Project, consists of a series of pipelines, tunnels, aqueducts and reservoirs that capture water from the Colorado River Basin and divert it to the Bonneville Basin for use along the populated Wasatch Front

in Utah. Construction and operation of the Strawberry Aqueduct and Collection System altered stream flows on approximately 240 miles of ten streams. Following years of discussion, a mitigation program was developed for SACS in 1988. To mitigate the impacts, several key agreements were made (including the Aquatic, Wildlife and Wetland Mitigation Plans), and legislation was enacted identifying a mitigation program. A portion of the entire mitigation program for SACS is fulfilled by the Angler-Access Acquisition and Corridor Management project. Specifically, public angler access would be acquired to replace lost angling opportunities. Fifty-one miles of angler access on specific stream reaches was identified for acquisition. Angler access would be acquired where instream flows were provided and in some instances, where stream habitat improvements were made (both mitigation measures of the SACS project). Wetland and riparian woodland mitigation was required on SACS-area streams for impacts caused by construction and operation of the Municipal and Industrial (M&I) System of the Bonneville Unit. Terrestrial habitats impacted by Bonneville Unit features are required to be mitigated for by acquiring and managing uplands (some of which are adjacent to the angler access corridors) for wildlife purposes.

Approximately 42.9 of the 51 miles identified on specific stream reaches for angler-access acquisition have been acquired by the Bureau of Reclamation and the Mitigation Commission. Approximately 8.1 miles remain to be acquired. Approximately 26,728 acres of riparian and upland habitat have been acquired as terrestrial wildlife mitigation in or adjacent to the angler-access corridors. Approximately 490 acres remain to be acquired and managed to fulfill the terrestrial wildlife mitigation requirement. Approximately 126.5 acres of wetlands have been acquired in the angler-access corridors, completing the wetland acquisition mitigation responsibilities associated with SACS.

After reviewing the EA, Biological Assessment, and public and agency comments, the Mitigation Commission has decided to implement the Modified Proposed Action as described in the Final EA. Under the Modified Proposed Action, the Bureau of Reclamation and Mitigation Commission will acquire an additional 8.1 river miles of angler access on specified river reaches and a minimum of 490 acres of specified adjacent uplands and will establish a management framework for the angler-
