II. Did EPA Approve the Application?

The Agency approved the application after considering all required data on risks associated with the proposed use of Trifloxystrobin, and information on social, economic, and environmental benefits to be derived from use. Specifically, the Agency has considered the nature of the chemical and its pattern of use, application methods and rates, and level and extent of potential exposure. Based on these reviews, the Agency was able to make basic health and safety determinations which show that use of Trifloxystrobin when used in accordance with widespread and commonly recognized practice, will not generally cause unreasonable adverse effects to the environment.

III. Approved Application

EPA issued a notice, published in the **Federal Register** of April 8, 1999 (64 FR 17170) (FRL-6064-4), which announced that Novartis Crop Protection, P.O. Box 18300, Greensboro, NC 27419-8300, had submitted applications to register the pesticide products, CGA-279202 WG, CGA-279202 Technical, and CGA-279202 WG Turf, fungicides (EPA files symbols 100-ORO, 100-ORI, and 100-OEN) respectively, containing the new active ingredient trifloxystrobin at 50% 98%, and 50% respectively, an active ingredient not included in any previously registered product.

EPA subsequently received an application from Novartis to register the product Stratego (EPA File Symbol 100-OUI), also containing the active ingredient trifloxystrobin. However, since the notice of receipt of this application to register the product as required by section 3(c)(4) of FIFRA, as amended did not publish in the **Federal Register**, interested parties may submit comments within 30 days from the date of publication of this notice for the product "Stratego" only.
