

Proposed Rules

Federal Register

Vol. 65, No. 9

Thursday, January 13, 2000

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF ENERGY

Office of Energy Efficiency and Renewable Energy

10 CFR Part 430

[Docket No. EE-RM/TP-99-500]

RIN 1904-AB04

Energy Conservation Program for Consumer Products: Test Procedure for Dishwashers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Proposed rule; reopening of the comment period.

SUMMARY: On September 28, 1999, the Department of Energy published a proposed rule to revise the test procedure for dishwashers under the Energy Policy and Conservation Act (64 FR 54428). In response to a request from the Association of Home Appliance Manufacturers (AHAM), we are reopening the comment period for this rulemaking.

DATES: The Department will accept comments, data, and information regarding the proposed rule no later than Monday, February 14, 2000. Please submit ten (10) copies. In addition, the Department requests that you provide an electronic copy (3½" diskette) of the comments in WordPerfect™ format.

ADDRESSES: Please send written comments regarding the proposed rule to Ms. Brenda Edwards-Jones at the following address: U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, EE-41, 1000 Independence Avenue, SW, Washington, DC 20585-0121.

You should identify all documents both on the envelope and on the documents as "Energy Conservation Program for Consumer Products: Test Procedure for Dishwashers, Docket No. EE-RM/TP-99-500."

You can read copies of the transcript of the public workshop held on November 2, 1999, and public

comments in the Freedom of Information Reading Room (Room No. 1E-190) at the U.S. Department of Energy, Forrestal Building, 1000 Independence Avenue, SW, Washington, DC, between the hours of 9:00 a.m. and 4:00 p.m., Monday through Friday, except Federal holidays.

The latest information regarding the dishwasher test procedure rulemaking is available on the Building Research and Standards web site at the following address: http://www.eren.doe.gov/buildings/codes_standards/notices/notc0024/index.htm

FOR FURTHER INFORMATION CONTACT:

Barbara Twigg, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, EE-41, 1000 Independence Avenue, SW, Washington, DC 20585-0121, (202) 586-8714, email: barbara.twigg@ee.doe.gov; or Eugene Margolis, Esq., U.S. Department of Energy, Office of General Counsel, GC-72, 1000 Independence Avenue, SW, Washington, DC 20585, (202) 586-9507, email: eugene.margolis@hq.doe.gov

SUPPLEMENTARY INFORMATION: The Department published a Notice of Proposed Rulemaking on September 28, 1999, entitled "Energy Conservation Program for Consumer Products: Test Procedure for Dishwashers." The notice announced December 13, 1999, as the end of the written comment period. In a letter dated December 9, 1999, AHAM requested a postponement of the deadline for the comment period in order to pursue possible testing alternatives, gather additional data, and comply with some of the requests for information made by the Department during the November 2, 1999, workshop.

Because of the complex issues raised at the workshop concerning the selection of a test method that accurately measures the energy consumption of a variety of soil-sensing dishwasher models, we are reopening the comment period until Monday, February 14, 2000. We are especially interested in obtaining additional information and suggestions regarding the proposed formulas and procedures for testing soil-sensing models. We hope that this time extension will permit a more comprehensive investigation into the performance mechanisms of soil-sensing machines pertaining to cycle length, cycle response, and

corresponding energy and water consumption levels.

Issued in Washington, DC, on January 7, 2000.

Dan W. Reicher,

Assistant Secretary, Energy Efficiency and Renewable Energy.

[Docket No. 26242, Notice No. 00-01]

RIN 2120-AF30

Suspension of Certain Aircraft Operations From the Transponder With Automatic Pressure Altitude Reporting Capability Requirement

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Proposed rule; withdrawal.

SUMMARY: The FAA is withdrawing a proposal to reinstate and modify the provisions of expired Special Federal Aviation Regulation (SFAR) No. 62. SFAR No. 62 suspended certain regulations requiring the installation and use of a transponder with automatic altitude reporting capability within 30 nautical miles of a Class B airspace area primary airport. SFAR No. 62 expired on December 30, 1993. The proposed reinstatement was intended to provide additional time during which aircraft operators could equip their aircraft with automatic altitude reporting transponders. Ten years have passed since implementation of the requirement to install and use automatic altitude reporting transponders in aircraft operating within 30 nautical miles of a Class B airspace area. The FAA finds that ample time has been provided for affected operators to comply with this equipment requirement. Consequently the FAA believes that the relief provided by the proposed regulation is no longer needed. Therefore, the FAA is withdrawing this proposal.

DATES: The proposed rule published on August 25, 1994 (59 FR 43994), is withdrawn as of January 13, 2000.

FOR FURTHER INFORMATION CONTACT: Ellen Crum, Airspace and Rules

Division, ATA-400, Air Traffic Airspace Management Program, Federal Aviation Administration, 800 Independence Ave, SW, Washington, DC 20591; telephone: (202) 267-8783.

SUPPLEMENTARY INFORMATION:

Background

On June 21, 1988, the FAA published a final rule, the Transponder with Automatic Altitude Reporting Capability Requirement (53 FR 23356; June 21, 1988), which required aircraft operating within 30 nautical miles of a Class B airspace area primary airport (commonly referred to as the Mode C veil) to be equipped with an operable transponder with automatic altitude reporting capability. Aircraft not originally certificated with an engine-driven electrical system or not subsequently certificated with such a system installed, balloons, and gliders were excluded from this requirement.

On December 5, 1990, the FAA published a final rule, SFAR No. 62 (55 FR 50302; Dec. 5, 1990), which suspended the automatic altitude reporting transponder requirement for certain aircraft operations in the vicinity of approximately 300 airports in the outlying area of Mode C veils but outside of the confines of the Class B airspace area. Specifically, SFAR No. 62 allowed for the operation of aircraft not equipped with an operable automatic altitude reporting transponder in the airspace at or below the altitude specified in the rule for the airport or along the most direct and expeditious routing (or on a routing directed by air traffic control (ATC)) between those airports and the outer boundary of the Mode C veil, consistent with established traffic patterns, noise abatement procedures, and safety. The purpose of SFAR No. 62 was to provide a limited transition period to allow operators flexibility in equipping their aircraft with transponders within a reasonable timeframe.

Prior to the adoption of SFAR No. 62, requests to deviate from the automatic altitude reporting transponder requirements were handled by ATC facilities on a case-by-case basis. If approved, the ATC authorization specified all restrictions or conditions necessary to ensure that the operation could be conducted safely and without any impact on other operations. The authorization process proved to be inefficient and time consuming for operators and ATC staff due to the very high number of operators requesting ATC authorizations because they had not yet equipped their aircraft with the required transponders.

On August 25, 1994, the FAA published a notice of proposed rulemaking (NPRM) (59 FR 43994; Aug. 25, 1994) that proposed, with some minor modifications, to reinstate the expired provisions of SFAR No. 62 as SFAR No. 62-1. The NPRM identified and excluded those airports where aircraft operations cannot be detected by radar when those operations are conducted at or below a specified altitude and within a 2-nautical-mile radius of the airport, or along the most direct route between that airport and the outer boundary of the Mode C veil. Airports served primarily by aircraft required to be equipped with Traffic Collision Avoidance System (TCAS) also were excluded from the list of airports where SFAR No. 62-1 would apply. The NPRM proposed to modify the expired SFAR No. 62 by revising the altitudes below which automatic altitude reporting transponders would not be required in the vicinity of certain airports where radar upgrades warranted such revisions. Lastly, the NPRM proposed modifications to the list of airports within the Denver Mode C veil at which aircraft operations were excluded from the automatic altitude reporting transponder requirement.

Discussion of Public Comments

Interested parties were invited to participate in the rulemaking process by submitting such written data, views, or arguments regarding the proposal. The comment period originally was scheduled to close on October 11, 1994. However, in accordance with 14 CFR 11.29(c), the Aircraft Owners and Pilots Association (AOPA) requested a 45-day extension of the comment period. The FAA determined that AOPA's request was in the public interest and extended the comment period to November 25, 1994 (59 FR 49360; Sept. 28, 1994).

One hundred fourteen private individuals and 18 associations, including government entities, submitted comments. Because one submission was signed by 13 commenters and another submission was signed by 22 commenters, 99 separate comments were actually received. All comments received during the comment period were considered before making a determination regarding final action on the proposed rule.

Most of the commenters suggest eliminating the automatic altitude reporting transponder equipment requirement when operating within 30 nautical miles of a primary airport listed in section 1 of appendix D to 14 CFR part 91. However, the NPRM did not propose or suggest eliminating the automatic altitude reporting

transponder requirement. Specifically, the NPRM proposed to continue, at specific locations and altitudes, a method that would allow aircraft operators to be exempted from the automatic altitude reporting transponder rule itself. Therefore, since the NPRM proposed no changes to the initial regulations requiring the use of transponders with automatic altitude reporting capability within 30 nautical miles of a Class B airspace area, the FAA finds these comments are outside the scope of this specific rulemaking action.

Several commenters oppose the reinstatement of the provisions of SFAR No. 62. These commenters state that the cost of equipping an aircraft with an automatic altitude reporting transponder is small in absolute terms when compared with the safety benefits provided by a transponder. They argue that the safety benefits include increased situational awareness for controllers and pilots when in contact with ATC. In addition, these commenters believe that excepting aircraft from automatic altitude reporting transponder requirements may compromise the effectiveness of TCAS because TCAS requires automatic altitude reporting transponder replies from nearby aircraft to determine whether a threat of potential collision exists.

The FAA agrees that automatic altitude reporting transponders provide increased benefits for controllers and pilots. If a controller is not yet in radio communication with an aircraft that is equipped with an automatic altitude reporting transponder, the transponder provides altitude information that can be received by other TCAS-equipped aircraft in the area, or ATC, without waiting for the pilot to check onto the ATC frequency. The FAA is not aware of any incidents where safety was compromised due to aircraft operating in accordance with SFAR 62. It is important to note, however, that the expired provisions of SFAR No. 62 and the proposed provisions of SFAR No. 62-1 provide access to outlying airports with a minimum of ATC involvement without degrading the safety benefits of the Mode C rule. When operating within the Mode C veil area, aircraft not equipped with an altitude encoding transponder can be accommodated safely, provided that operations are conducted in accordance with restrictions set forth in the ATC authorization.

The FAA notes that in the NPRM, the FAA requested specific comments regarding the effectiveness of SFAR No. 62, as well as the number of aircraft

operators who had benefited from the SFAR. Commenters did not provide information concerning either the number of operators benefiting from the SFAR, or the number of aircraft that are not equipped with automatic altitude reporting transponders and operating within the Mode C veil areas.

When the FAA promulgated the Mode C veil rule in 1988, the intent was to require all aircraft, with certain regulatory exceptions, to be equipped with an operable altitude encoding transponder when operating within 30 nautical miles of a Class B airspace area primary airport. For those instances where a pilot was unable to comply with this equipment requirement, an ATC authorization could be obtained from the appropriate ATC facility. SFAR No. 62 was promulgated as a temporary measure only to alleviate the workload associated with granting ATC authorizations and to allow additional time for certain operators to equip their aircraft with altitude encoding transponders.

There are no regulations requiring aircraft owners to report the types of transponders installed in their aircraft. Therefore, it is difficult to estimate the number of aircraft that are equipped with altitude reporting transponders. However, in 1995, the FAA published the "General Aviation and Air Taxi Activity and Avionics Survey," prepared by the Office of Aviation Policy and Plans (APO-1). The survey provides information about the activity and avionics equipment of the general aviation and air taxi fleet. The information for the survey is collected using a statistically designed sample survey. The sample is selected from all general aviation and air taxi aircraft registered with the FAA. According to this survey, almost 70 percent of fixed wing general aviation aircraft have Mode C or Mode S installed, and almost 60 percent of rotorcraft have Mode C or Mode S installed.

Several years have passed since SFAR No. 62 was promulgated in 1990. The FAA believes that sufficient time has been provided for aircraft operators to purchase and install automatic altitude reporting transponders. Moreover, the best available information indicates that a majority of operators have installed altitude encoding transponders. Those aircraft operators without an operating transponder may use the ATC authorization procedures to get relief from the equipment requirement; therefore, the FAA is withdrawing the proposed rule to reinstate SFAR No. 62. The FAA will continue to assess the impact of the 1988 equipment

requirement upon aircraft operators and the National Airspace System.

Withdrawal of Proposed Rule

Accordingly, the proposed amendment to reinstate SFAR No. 62 as SFAR No. 62-1 under 14 CFR Part 91 (Notice No. 94-28), published on page 43994 in the *Federal Register* of August 25, 1994, is withdrawn.

Issued in Washington, DC on January 7, 2000.

John Walker,

Program Director, Air Traffic Airspace Management Program.

RIN 2120-AE79

Antidrug Program and Alcohol Misuse Prevention Program for Employees of Foreign Air Carriers Engaged in Specified Aviation Activities

AGENCY: Federal Aviation Administration, DOT.

ACTION: Withdrawal of proposed rule.

SUMMARY: The Omnibus Transportation Employee Testing Act of 1991 (the Act) authorized the Federal Aviation Administration (FAA) Administrator to prescribe regulations that would require foreign air carriers to establish drug and alcohol testing programs for employees performing safety-sensitive aviation functions, but only to the extent such regulations are consistent with the international obligations of the United States and take into consideration any applicable laws and regulations of foreign countries. This document withdraws the proposed rulemaking to require foreign air carriers to establish drug and alcohol testing programs for their employees performing safety-sensitive aviation functions within the territory of the United States. The FAA has determined that through the International Civil Aviation Organization (ICAO) multilateral action has been taken to support an aviation environment free of substance abuse. However, if the threat to aviation safety posed by substance abuse has increased or requires additional efforts and the international community has not adequately responded, the FAA will take appropriate action, including, if necessary, the reinitiation of this rulemaking.

DATES: The proposed rule is withdrawn as of January 13, 2000.

FOR FURTHER INFORMATION CONTACT: Ms. Diane J. Wood, Office of Aviation Medicine, Drug Abatement Division (AAM-800), Federal Aviation Administration, 800 Independence Ave., SW., Washington, DC 20591; telephone (202) 267-8442.

SUPPLEMENTARY INFORMATION:

Background

In the Omnibus Transportation Employee Testing Act of 1991, the Administrator was authorized, among other things, to prescribe regulations requiring foreign air carriers to implement drug and alcohol testing programs, but only if such regulations as were consistent with the international obligations of the United States. The Administrator was also directed to take into consideration foreign laws and regulations.

Pursuant to this statute, in December 1992, the FAA issued an advance notice of proposed rulemaking (ANPRM) in which a number of questions about the legal, practical, and cultural issues associated with testing were posed [57 FR 59473]. The FAA received 65 comments on the ANPRM, most of which were provided by foreign governments of foreign air carriers. Nineteen of the comments were procedural, requesting an extension of the comment period. Three comments were received that supported the concept of unilateral imposition of testing requirements on foreign air carriers. The remaining comments stated objection in whole or in part to the possible unilateral imposition of testing requirements on foreign air carriers in the United States. In February 1994, the FAA issued a notice of proposed rulemaking (NPRM) to require foreign air carriers operating to the United States to implement testing programs like those required of U.S. carriers unless multilateral action was taken to support an international aviation environment free of substance abuse [59 FR 7420].

The FAA cited as a specific example of such action the work in progress by an International Civil Aviation Organization (ICAO) working group to develop guidance material on substance abuse prevention methodologies. ICAO is a treaty organization through which the signatory countries (known as the "Contracting States") develop and promote safe and efficient international aviation. There are currently more than 180 Contracting States (including the United States), covering virtually every part of the world. The Contracting States
