

to validation, acceptance, and national/international harmonization of toxicological test methods. ICCVAM seeks to promote the scientific validation and regulatory acceptance of toxicological test methods that will enhance the agencies' ability to assess risks and make decisions and that will refine, reduce, and replace animal use whenever possible. NICEATM provides administrative and technical support for ICCVAM and serves as a communication and information resource. NICEATM and ICCVAM collaborate to carry out related activities needed to develop, validate, and achieve regulatory acceptance of new and improved test methods applicable to Federal agencies. These activities may include:

1. Test Method Workshops are convened as needed to evaluate the adequacy of current test methods for assessing specific toxicities, to identify areas in need of improved or new testing methods, and to identify research and validation efforts that may be needed to develop a new test method.
2. Expert Panel Meetings are typically convened to evaluate the validation status of a test method following the completion of initial development and pre-validation studies. An Expert Panel is asked to recommend additional validation studies that might be helpful in further characterizing the usefulness of a method and to identify any additional research and development efforts that might support or enhance the accuracy and efficiency of a method.
3. Independent Peer Review Panel Meetings are typically convened following the completion of comprehensive validation studies on a test method. Panels are asked to develop scientific consensus on the usefulness and limitations of test methods and to generate information for specific human health and/or ecological risk assessment purposes. Following the review of a test method, ICCVAM forwards recommendations on its usefulness to agencies for their consideration. Federal agencies then determine the regulatory acceptability of a method according to their mandates.
