

antiherpes agents that lack cross-resistance to the currently available class become available, issues relating to misuse and resistance will need to be thoroughly evaluated in an actual use setting of an antiviral agent for recurrent herpes labialis, particularly if OTC marketing is proposed sometime in the future. At present, based on a public health-based risk/benefit assessment with respect to treatment of herpes labialis, the agency concludes that antiherpes agents should not be made available OTC.

This draft guidance is being issued consistent with FDA's good practices (62 FR 8961, February 27, 1997). The draft guidance represents the agency's current thinking on OTC treatment of herpes labialis with antiviral agents. Its does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such an approach satisfies the requirements of the applicable statute, regulations, or both.

Interested persons may submit to the Dockets Management Branch (address above) written comments on the draft guidance. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. The draft guidance and received comments are available for public examination in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Dated: February 17, 2000.
