AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing revisions to the California State Implementation Plan (SIP) which concern rule rescissions from the Sacramento Metropolitan Air Quality Management District (SMAQMD), San Diego County Air Pollution Control (SDCAPCD), San Joaquin Valley Unified Air Pollution Control District and amendments to the Ventura County Air Pollution Control District (APCD).

The intended effect of this action is to update and clarify the State Implementation Plan in accordance with the requirements of the Clean Air Act, as amended in 1990 (CAA or the Act). In the Final Rules section of this **Federal Register**, the EPA is approving the state's SIP submittal as a direct final rule without prior proposal because the Agency views this as a noncontroversial revision and anticipates no adverse comments. A detailed rationale for this approval is set forth in the direct final rule. If no adverse comments are received, no further activity is contemplated. If EPA receives adverse

comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. The EPA will not institute a second comment period. Any parties interested in commenting should do so at this time.

DATES: Written comments must be received by May 5, 2000.

ADDRESSES: Comments should be addressed to: Andrew Steckel, Rulemaking Office (AIR-4), Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105-3901.

RIN No. 2127-AH61

Federal Motor Vehicle Safety Standards; Head Impact Protection

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document proposes to amend the upper interior impact requirements of Standard No. 201, Occupant Protection in Interior Impact, to modify the minimum distance between certain target points on vertical surfaces inside a vehicle. Compliance with the upper interior impact requirements is determined, in part, by measuring the forces experienced by a test device known as the Free Motion Headform (FMH) when it is propelled into certain target points in the vehicle

interior. To ensure that tests conducted within the same vehicle do not affect each other, the standard specifies that tested targets be at least a certain distance apart; currently 150 mm (6 inches). We are proposing to expand this minimum distance to 200 mm (8 inches) for tests performed on certain vertical surfaces in order to alleviate concerns that the current distance is not large enough to prevent FMH impact overlap to nearby target points in the same vehicle. We are also proposing to add target points for pillar-like structures that do not meet the definition of "pillar," *i.e.*, certain door frames and vertical seat belt mounting structures.
