

Assay for the Detection of a Variety of Tumors in Biological Specimens

Larry W. Fisher, Neal S. Fedarko, Marian F. Young (NICHD)
DHHS Reference No. E-173-98/0 filed
09 Apr 1999

The inventors have developed methods and reagents for the detection of bone sialoprotein (BSP) in biological samples. The technology relates to the disruption of a serum complex that masks the majority of BSP from established detection systems. Furthermore, there is evidence that there may be a more acidic form of BSP secreted not by normal bone, but only by tumors. Detection of BSP in serum may be a good marker of various bone diseases and a variety of cancers including breast, prostate, lung, and thyroid.

Dated: April 25, 2000.

Jack Spiegel,

Director, Division of Technology Development and Transfer, Office of Technology Transfer, National Institutes of Health.
