SUPPLEMENTARY INFORMATION: Flint Hills National Wildlife Refuge straddles the Neosho River in eastern Kansas. The area is dominated by complex resource management issues revolving around the flood control function of John Redmond Reservoir. Activities associated with agriculture, flood control, and public recreation have placed increasing demands on the landscape and identified the need for more responsible utilization of land and water resources that support the remaining native ecosystem components.

Flint Hills National Wildlife Refuge will continue to conserve habitat for the diverse array of native plants and animals that rely upon the resources of the Refuge for survival. This Plan describes the conservation activities that the Fish and Wildlife Service intends to carry out on Flint Hills NWR and other areas of the Neosho watershed.

Dated: June 8, 2000.
