

supporting comments further expressed concern over the potential impact on the Chicago Mercantile Exchange (CME) Feeder Cattle cash settlement price. They requested AMS analyze the potential impact on the current market situation using the 1979 Feeder Cattle standards and the proposed standards. Market News evaluated a limited number of markets during September/October 1999 and November/December 1999. The evaluation determined the number of cattle identified as No. 1 muscle score will decline, however the average cost per hundred weight will increase. This information will allow the CME to make any appropriate adjustments in feeder cattle future contracts.

One comment focused on muscling and its lack of importance to lean yield. However, current research indicates that truly heavy muscled cattle are not sufficiently recognized by the current standards to have an impact in the price discovery process. One comment interpreted the proposed standard as being initiated by USDA, AMS and not as an industry driven, research supported modification to the current standards. As discussed previously, the update of the standards is supported by the CSU study and the request for the update was initiated by industry and other groups, including State Departments of Agriculture, that officially grade feeder cattle for marketing programs. The updated standards more accurately represent today's population of feeder cattle and thus should provide the industry with more meaningful market evaluations.

In consideration of the submitted public comments, and all other available information, USDA is revising the official U.S. Standards for Grades of Feeder Cattle by modifying the frame size parameters as shown in Table 1.

TABLE 1.—WEIGHT/FRAME SIZE

Frame size	Steers weight, lbs.	Heifers weight, lbs.
Small	<1100	<1000

TABLE 1.—WEIGHT/FRAME SIZE—
Continued

Frame size	Steers weight, lbs.	Heifers weight, lbs.
Medium	1100–1250	1000–1150
Large	>1250	>1150

Also, the changes adjust the minimum requirements for the muscle thickness grades and increase the number of grades from three (3) to four (4) to accommodate thicker muscled cattle. In order to allow the industry sufficient time to update its current system, the updated standards will be implemented October 1, 2000.
