### Background

In 1998, more than 4,000 urban, suburban, and rural communities in the United States were experiencing youth gang problems. More than 30,000 youth gangs and 800,000 youth gang members were reported in the most recent systematic, annual nationwide survey of law enforcement agencies conducted by OJJDP's National Youth Gang Center.

Research findings from OJJDP and the National Institute of Justice (NIJ) suggest that youth gangs continue to present a serious threat to public safety, despite the recent downturn in juvenile crime. OJJDP's Program of Research on the Causes and Correlates of Delinquency found that youth who are involved in youth gangs commit three to seven times as many delinquent and criminal offenses as youth who are not gang involved. The studies found this trend holds true even when comparing gang youth to nongang youth who were delinquents. Involvement with the juvenile and criminal justice systems is usually not a new experience for youth who join gangs. Many of these youth not only have come into previous contact with the justice system, but in many cases have also been involved in or in need of child protective, mental health, and other services. These youth are known to experience significant risk factors in numerous domains and pose a threat not only to their own safety, but to the safety of their families and their communities as well.

The threat of gang crime and violence is not limited to the streets. According to the 1998 National Youth Gang Survey, 40 percent of youth gang members in the United States are estimated to be under age 17. Presumably, most of these youth are still in school. The percentage of public school students who reported that gangs were present in their schools nearly doubled from 17 percent in 1989 to 31 percent in 1995, according to the U.S. Departments of Education and Justice. Thus, youth gang activity is also a threat to the very place sometimes assumed to be free from safety threats: the classrooms. These issues present a continuing need for communities to seek progressive and promising approaches to address the problem.

The purpose of the Gang-Free Communities Program is to provide up to 12 communities an opportunity to implement the OJJDP Comprehensive Gang Model as a way of addressing its local youth gang problem. The purpose
