I. Introduction

The Clean Air Act (CAA), as amended, required the Administrator of EPA to promulgate regulations requiring manufacturers of fuels and fuel additives ("F/FAs") to conduct tests to determine potential health effects of such products. The final rule, promulgated on May 27, 1994, established new health effects testing requirements for the registration of designated F/FAs as authorized by CAA sections 211(b)(2) and 211(e) of the CAA.

The registration requirements are organized within a three-tier structure. Tier 1 requires F/FA manufacturers to supply to EPA (1) the identity and concentration of certain emission products of designated F/FAs and an analysis of potential emission exposures, and (2) any available information regarding the health and welfare effects of the whole and speciated emissions. 40 CFR 79.52. Tier 2 requires that combustion emissions of each F/FA subject to the testing requirements be tested for subchronic systemic and organic toxicity, as well as the assessment of specific health effect endpoints. 40 CFR 79.53. Tier 3 testing may be required, at EPA's discretion, when remaining uncertainties as to the significance of observed health or welfare effects, or emissions exposures interfere with EPA's ability to reasonably assess the potential risks posed by emissions from a F/FA. 40 CFR 79.54. EPA's regulations permit submission of adequate existing test
