**SUPPLEMENTARY INFORMATION:** The EIS would evaluate the effects of a proposed land lease of approximately 50 acres (at 40°46'N Latitude, 6°97'W Longitude) on the Moapa Indian Reservation, where Calpine proposes to construct and operate a 760-megawatt combined cycle power plant. The proposed plant would be fueled by natural gas from the existing Kern River (Williams) Natural Gas Pipeline, which is located on the Reservation approximately 2,500 feet from the plant site. The plant would employ three gas turbines and one heat recovery steam generator. The stack height would be approximately 150 to 175 feet, with a diameter of about 18 feet. Groundwater would be used in operations and for cooling. Water is expected to be discharged to an on-site 10 to 15 acre evaporation pond.

The project is also proposed to include: (1) A gas supply lateral pipeline on reservation land; (2) a power grid interconnection at the Harry Allen substation, approximately 12 miles southwest of the plant site; (3) two parallel 230kV lines traversing both reservation land and Bureau of Land Management land, mostly within an existing utility corridor; and (4) a roadway connecting the site to Interstate Highway 15. The exact location of the roadway is still being evaluated due to design considerations.

Significant issues to be covered during the scoping process may include, but not be limited to, air quality, geology and soils, surface and groundwater resources, biological resources, cultural resources, socio-economic conditions, land use, aesthetics, environmental justice, and Indian trust assets.
