

underlying the training and education opportunities provided through the ATTCs is to enhance the competencies of professionals in a variety of disciplines to address the clinical needs of individuals with substance abuse problems using research-based curricula and training materials through both traditional and non-traditional technologies.

The ATTCs disseminate current health services research from the National Institute on Drug Abuse, National Institute on Alcohol Abuse and Alcoholism, National Institute of Mental Health, Agency for Health Care Policy and Research, National Institute of Justice, and other sources and applied knowledge development activities from SAMHSA using innovative technologies by developing and updating state-of-the-art research-based curricula and developing faculty and trainers. Participants in ATTC training events are self-identified and participate in either

academic courses or continuing education/professional development training events. Academic courses are offered at all levels. Continuing education/professional development training is designed to meet identified needs of counselors and other professionals who work with individuals with substance abuse problems.

Both a process and an outcome assessment will be conducted. The process component will describe the training and education needs of pre-service and currently practicing professionals, the types of training events that students/trainees receive through the ATTCs, and student/trainee satisfaction with services. The outcome component will focus on changes in clinical practice made by trainees as a result of knowledge received.

Analysis of this information will assist CSAT in documenting the numbers and types of participants in ATTC education/training offerings,

describing the extent to which participants improve in their clinical competency, and which method is most effective in disseminating knowledge to the various audiences. This type of information is crucial to support CSAT in complying with GPRA reporting requirements and will inform future development of knowledge dissemination activities.

The study design for students and trainees will include a description of each course/training event, and a pre-post design that collects identical information at initiation of ATTC courses/trainings, at the completion of the course/training, and again after 3 months. This time frame is necessary to allow students/trainees the opportunity to implement changes in clinical practice. In addition, the study will collect satisfaction measures after each course/training event.

The chart below summarizes the annualized burden for this project.

Respondent type	Number of respondents	Average responses/respondent	Average time/response (hours)	Annual burden (hours)
Students/trainees	12,000	4	.52	6,240
Faculty/trainers	195	1	.25	49
ATTC summary reports	13	4	2.00	104
Total	12,208	6,393
