

by insufficient flow (salt marshes were injured by PCBs); restoring water quality in Winsegansett Pond by investigating and correcting pollutant inputs (salt pond habitat assists natural resources injured by PCBs); and restoring living resources through eelgrass planting (eelgrass plantings assist in the restoration of natural resources injured by PCBs). These restoration activities would provide replacement for similar lost or injured natural resources in the Harbor Environment.

The Council also believes that there are opportunities to educate people about restoration of PCB injured natural resources in the New Bedford Harbor Environment through conducting activities at this site and encouraging additional restoration efforts. For example, there are eelgrass beds, saltmarsh and a salt pond located on the site. As those areas are restored, or enhanced, it may be appropriate to provide specific training programs to educate schoolchildren, the public, and municipal officials regarding the functions of these resources, and the appropriate methodologies to restore and monitor the resources in the New Bedford Harbor Environment.

The Council also evaluated the need for a full-time staff person to be funded from the New Bedford Harbor Trust Accounts. The Council chose instead only to recommend sufficient funds to allow contracting for the specific services needed. The Council also recommends some funding for the trail and public access improvements and protective/interpretative signage.
